Democracy Dialogue And Environmental Disputes The Contested Languages Of Social Regulation:

Democracy, Dialogue, and Environmental Disputes Bruce A. Williams, Albert R. Matheny, 1998-04-01 At every level of government environmental regulation is under siege In Washington it has been attacked first through the New Federalism and now through the Contract with America Outside the capital environmental regulation is the subject of controversy as state and local officials struggle with new responsibilities threats of industry exit and challenges from grassroots groups This book addresses the conundrum of regulation by tracing its source to the competing characterizations of regulatory legitimacy that have accompanied the growth of the American state Bruce Williams and Albert Matheny identify three distinct languages managerial pluralist and communitarian used to articulate competing visions of regulation They argue that each language posits a different understanding of the public interest and therefore a different relationship between the state the market and the public Because all three languages are invoked in regulatory debates disputants talk past one another leaving fundamental issues of legitimacy and democracy unresolved or masked by unexamined assumptions The authors propose a dialogic model for analyzing regulatory policymaking drawing on postmodernist theory that claims that establishing single languages for understanding the world inevitably distorts communication They then apply their analysis to case studies of actual environmental disputes over hazardous waste regulation in the 1980s and 1990s in New Jersey Ohio and Florida

Social Movements and Networks Mario Diani, Doug McAdam, 2003 Social Movements and Networks examines the extent to which a network approach should inform research on collective action For the first time in a single volume leading social movements researchers systematically map out and assess the contribution of social network approaches to their field of enquiry in light of broader theoretical perspective By exploring how networks affect individual contributions to collective action in both democratic and non democratic organizations and how patterns of inter organizational linkages affect the circulation of resources within and between movements the authors show how network concepts improve our grasp of the relationship between social movements and elites and of the dynamics of the political processes

Deliberative Policy Analysis Maarten A. Hajer, Hendrik Wagenaar, 2003-05-15 What kind of policy analysis is required now that governments increasingly encounter the limits of governing Exploring the contexts of politics and policy making this 2003 book presents an original analysis of the relationship between state and society and new possibilities for collective learning and conflict resolution The key insight of the book is that democratic governance calls for a new deliberatively oriented policy analysis Traditionally policy analysis has been state centered based on the assumption that central government is self evidently the locus of governing Drawing on detailed empirical examples the book examines the influence of developments such as increasing ethnic and cultural diversity the complexity of socio technical systems and the impact of transnational arrangements on national policy making This contextual approach indicates the need to rethink the relationship between social theory policy analysis and politics The book is essential reading for all those involved in the study of public policy

Taking Sustainable Cities Seriously, second edition Kent E. Portney, 2013-01-11 A theoretically driven comparison of sustainability programs in American cities updated with the latest research and additional case studies Today most major cities have undertaken some form of sustainability initiative Yet there have been few systematic comparisons across cities or theoretically grounded considerations of what works and what does not and why In *Taking Sustainable Cities Seriously* Kent Portney addresses this gap offering a comprehensive overview and analysis of sustainability programs and policies in American cities After discussing the conceptual underpinnings of sustainability he examines the local aspects of sustainability considers the measurement of sustainability and offers an index of serious sustainability for the fifty five largest cities in the country examines the relationship between sustainability and economic growth and discusses issues of governance equity and implementation He also offers extensive case studies with separate chapters on large medium size and small cities and provides an empirically grounded analysis of why some large cities are more ambitious than others in their sustainability efforts This second edition has been updated throughout with new material that draws on the latest research It also offers numerous additional case studies a new chapter on management and implementation issues and a greatly expanded comparative analysis of big city sustainability initiatives Portney shows how cities use the broad rubric of sustainability to achieve particular political ends and he dispels the notion that only cities that are politically liberal are interested in sustainability *Taking Sustainable Cities Seriously* draws a roadmap for effective sustainability initiatives

Navigating Social-Ecological Systems Fikret Berkes, Johan Colding, Carl Folke, 2008-04-24 In the effort towards sustainability it has become increasingly important to develop conceptual frames to understand the dynamics of social and ecological systems Drawing on complex systems theory this book investigates how human societies deal with change in linked social ecological systems and build capacity to adapt to change The concept of resilience is central in this context Resilient social ecological systems have the potential to sustain development by responding to and shaping change in a manner that does not lead to loss of future options Resilient systems

also provide capacity for renewal and innovation in the face of rapid transformation and crisis The term navigating in the title is meant to capture this dynamic process Case studies and examples from several geographic areas cultures and resource types are included merging forefront research from natural sciences social sciences and the humanities into a common framework for new insights on sustainability *Climate of Capitulation* Vivian E. Thomson, 2017-04-21 How power is wielded in environmental policy making at the state level and how to redress the ingrained favoritism toward coal and electric utilities The United States has pledged to the world community a reduction in greenhouse gas emissions by 26-28 percent below 2005 levels in 2025 Because much of this reduction must come from electric utilities especially coal fired power plants coal states will make or break the U.S. commitment to emissions reduction In *Climate of Capitulation* Vivian Thomson offers an insider's account of how power is wielded in environmental policy making at the state level Thomson a former member of Virginia's State Air Pollution Control Board identifies a climate of capitulation in state government a deeply rooted favoritism toward coal and electric utilities in states air pollution policies Thomson narrates three cases involving coal and air pollution from her time on the Air Board She illuminates the overt and covert power struggles surrounding air pollution limits for a coal fired power plant just across the Potomac from Washington for a controversial new coal fired electrical generation plant in coal country and for coal dust pollution from truck traffic in a country hollow Thomson links Virginia's climate of capitulation with campaign donations that make legislators politically indebted to coal and electric utility interests a traditionalistic political culture tending to inertia and a part time legislature that depended on outside groups for information and bill drafting Extending her analysis to fifteen other coal dependent states Thomson offers policy reforms aimed at mitigating the ingrained biases toward coal and electric utilities in states air pollution policy making

Allocating the Earth Breana Holland, 2014-09-04 This book advances a new distributional framework to guide the evaluation and design of environmental policies Drawing on capabilities theory especially as articulated in Martha Nussbaum's capabilities approach to justice the book proposes that environmental policies should aim to secure the basic capabilities that make it possible for people to live a flourishing and dignified human life Holland begins by establishing protection of the natural environment as central to securing these capabilities and then considers the implications for debates in environmental valuation policy justification and administrative rulemaking In each of these areas she demonstrates how a capabilities approach to social and environmental justice can minimize substantive and procedural inequities that result from how we evaluate and design environmental policies in contemporary society Holland's proposals include valuing environmental goods and services as comparable but not commensurable across the same dimension of well being of different people justifying environmental policies with respect to both the capability thresholds they secure and the capability ceilings they establish and subjecting the outcomes of participatory decisions in the administrative rulemaking process to stronger substantive standards In developing and applying this unique approach to justice Holland primarily focuses on

questions of domestic environmental policy In the closing chapter she turns to theoretical debates about international climate policy and sketches how her approach to justice could inform both the philosophical grounding and practical application of efforts to achieve global climate justice Engaging current debates in environmental policy and political theory the book is a sustained exercise of both applied and environmental political theory *Locality and Identity* Jane Holder,Donald McGillivray,2019-01-15 First published in 1999 this volume is concerned with how issues of identity and locality globalization and ethics valuing the environment environmental justice and the use of traditional and new legal forms cross the disciplines of law ethics geography political science and social theory Necessarily diverse the collection both explores and confronts the limitations of law that prevent recognition of the relationship between humans and nature
