Dependence In Probability And Statistics Lecture Notes In Statistics:

Dependence in Probability and Statistics Paul Doukhan, Gabriel Lang, Donatas Surgailis, Gilles Teyssière, 2010 This volume collects recent works on weakly dependent long memory and multifractal processes and introduces new dependence measures for studying complex stochastic systems Other topics include the statistical theory for bootstrap and permutation statistics for infinite variance processes the dependence structure of max stable processes and the statistical properties of spectral estimators of the long memory parameter The asymptotic behavior of Fejér graph integrals and their use for proving central limit theorems for tapered estimators are investigated New multifractal processes are introduced and their multifractal properties analyzed Wavelet based methods are used to study multifractal processes with different multiresolution quantities and to detect changes in the variance of random processes Linear regression models with long range dependent errors are studied as is the issue of detecting changes in their parameters **Dependence in Probability**

and Statistics Patrice Bertail, Paul Doukhan, Philippe Soulier, 2006-09-24 This book gives an account of recent developments in the field of probability and statistics for dependent data It covers a wide range of topics from Markov chain theory and weak dependence with an emphasis on some recent developments on dynamical systems to strong dependence in times series and random fields There is a section on statistical estimation problems and specific applications The book is written as a succession of papers by field specialists alternating general surveys mostly at a level accessible to graduate students in probability and statistics and more general research papers mainly suitable to researchers in the field **Dependence in Probability and Statistics** Paul Doukhan, Gabriel Lang, Donatas Surgailis, Gilles Teyssière, 2010-07-23 This account of recent works on weakly dependent long memory and multifractal processes introduces new dependence measures for studying complex stochastic systems and includes other topics such as the dependence structure of max stable processes

Functional Statistics and Applications Elias Ould Saïd, Idir Ouassou, Mustapha Rachdi, 2015-11-29 This volume which highlights recent advances in statistical methodology and applications is divided into two main parts The first part presents theoretical results on estimation techniques in functional statistics while the second examines three key areas of application estimation problems in queuing theory an application in signal processing and the copula approach to epidemiologic modelling The book's peer reviewed contributions are based on papers originally presented at the Marrakesh International Conference on Probability and Statistics held in December 2013 **Nonparametric Statistics** Patrice Bertail, Delphine Blanke, Pierre-André Cornillon, Eric Matzner-Løber, 2019-03-08 This volume presents the latest advances and trends in nonparametric statistics and gathers selected and peer reviewed contributions from the 3rd Conference of the International Society for Nonparametric Statistics ISNPS held in Avignon France on June 11-16 2016 It covers a broad range of nonparametric statistical methods from density estimation survey sampling resampling methods kernel methods and extreme values to statistical learning and classification both in the standard i.i.d case and for dependent data including big data The

International Society for Nonparametric Statistics is uniquely global and its international conferences are intended to foster the exchange of ideas and the latest advances among researchers from around the world in cooperation with established statistical societies such as the Institute of Mathematical Statistics the Bernoulli Society and the International Statistical Institute The 3rd ISNPS conference in Avignon attracted more than 400 researchers from around the globe and contributed to the further development and dissemination of nonparametric statistics knowledge

Cyclostationarity: Theory and Methods - IV Fakher Chaari, Jacek Leskow, Radosław Zimroz, Agnieszka Wyłomańska, Anna Dudek, 2019-07-31 This book gathers contributions presented at the 10th Workshop on Cyclostationary Systems and Their Applications held in Grójec nad Dunajcem Poland in February 2017 It includes twelve interesting papers covering current topics related to both cyclostationary and general non stationary processes Moreover this book which covers both theoretical and practical issues offers a practice oriented guide to the analysis of data sets with non stationary behavior and a bridge between basic and applied research on nonstationary processes It provides students researchers and professionals with a timely guide on cyclostationary systems nonstationary processes and relevant engineering applications

Long-Memory Processes Jan Beran, Yuanhua Feng, Sucharita Ghosh, Rafał Kulik, 2013-05-14 Long memory processes are known to play an important part in many areas of science and technology including physics geophysics hydrology telecommunications economics finance climatology and network engineering In the last 20 years enormous progress has been made in understanding the probabilistic foundations and statistical principles of such processes This book provides a timely and comprehensive review including a thorough discussion of mathematical and probabilistic foundations and statistical methods emphasizing their practical motivation and mathematical justification Proofs of the main theorems are provided and data examples illustrate practical aspects This book will be a valuable resource for researchers and graduate students in statistics mathematics econometrics and other quantitative areas as well as for practitioners and applied researchers who need to analyze data in which long memory power laws self similar scaling or fractal properties are relevant

Extreme Value Modeling and Risk Analysis Dipak K. Dey, Jun Yan, 2016-01-06 Extreme Value Modeling and Risk Analysis Methods and Applications presents a broad overview of statistical modeling of extreme events along with the most recent methodologies and various applications The book brings together background material and advanced topics eliminating the need to sort through the massive amount of literature on the subject

Statistics of Extremes Jan Beirlant, Yuri Goegebeur, Johan Segers, Jozef L. Teugels, 2004-10-15 Research in the statistical analysis of extreme values has flourished over the past decade new probability models inference and data analysis techniques have been introduced and new application areas have been explored Statistics of Extremes comprehensively covers a wide range of models and application areas including risk and insurance a major area of interest and relevance to extreme value theory Case studies are introduced providing a good balance of theory and application of each model discussed incorporating many illustrated examples and plots of data The last part of the book

covers some interesting advanced topics including time series regression multivariate and Bayesian modelling of extremes the use of which has huge potential Limit Theorems for Associated Random Fields and Related Systems Aleksandr Vadimovich Bulinski?, Alexey Shashkin, 2007 This volume is devoted to the study of asymptotic properties of wide classes of stochastic systems arising in mathematical statistics percolation theory statistical physics and reliability theory Attention is paid not only to positive and negative associations introduced in the pioneering papers by Harris Lehmann Esary Proschan Walkup Fortuin Kasteleyn and Ginibre but also to new and more general dependence conditions Naturally this scope comprises families of independent real valued random variables A variety of important results and examples of Markov processes random measures stable distributions Ising ferromagnets interacting particle systems stochastic differential equations random graphs and other models are provided For such random systems it is worthwhile to establish principal limit theorems of the modern probability theory central limit theorem for random fields weak and strong invariance principles functional law of the iterated logarithm etc and discuss their applications There are 434 items in the bibliography The book is self contained provides detailed proofs for reader s convenience some auxiliary results are included in the Appendix e g the classical Hoeffding lemma basic electric current theory etc
