Azeiteiro, Rudi Pretorius, 2021-05-03 In order to yield the expected benefits, sustainability initiatives need to be undertaken by means of a close cooperation between universities on the one hand and societal partners on the others.

The principle of co creation and co execution of sustainability initiatives increases the value for all by mutual learning and the sharing of expertise and resources But pursuing sustainability initiatives with a community and societal involvement is not simple There is a perceived need for a better understanding of how universities can interact with society in order to support the implementation of the UN Sustainable Development Goals This book is an attempt to address this need by a novel approach which focuses on current potentials and challenges across a wide range of fields and expertise The book focuses on how the theory and practice of sustainable development interact and shows the need for a continuation of the dialogue among sustainability academics and practitioners so as to address the issues matters and problems at hand The spectrum of themes addressed on this book also entails how environmental values and ethics are applied and the relationship between social biological and cultural diversity It also includes a broad disciplinary approach to sustainability including education research and case studies and the links with human environment relations in a sustainable development context

removal: Perspectives from the social sciences and humanities Anders Hansson, Mathias Fridahl, Miranda Boettcher, Shinichiro Asayama, 2024-07-09 Carbon dioxide removal CDR approaches are becoming increasingly central to visions of decarbonizing national economies The past few years have seen an increasing number of countries committed to net zero targets preceded by a surge of modelled 1.5°C scenarios envisioning large scale future CDR deployment The prospect of CDR deployment raises new complex socio ecological challenges and presents new deep uncertainties These complexities challenges and uncertainties cannot be investigated using solely the techno economic modelling and environmental risk assessment methods that currently dominate the construction of policy relevant knowledge on CDR Social sciences and the humanities perspectives on CDR are often restricted to instrumental tasks such as investigating public acceptance overcoming social resistance or supporting the development of integrated assessment models There is a need for more diverse investigations of CDR which include not only environmental and techno economic dimensions but also explore key societal complexities challenges and uncertainties Against this backdrop we call for submissions on CDR stemming from perspectives within the social sciences and humanities We encourage novel empirical and theoretical contributions on CDR related policy design or analyses of recent policy developments at sub national national and international levels of governance e.g. in context of climate targets and strategies climate tipping points mitigation deterrence or societal transformations
