Computer-Aided Design of User Interfaces III Christophe Kolski, Jean Vanderdonckt, 2012-12-06 Advances in electronics communications and the fast growth of the Internet have made the use of a wide variety of computing devices an every day occurrence These computing devices have different interaction styles input output techniques modalities characteristics and contexts of use Furthermore users expect to access their data and run the same application from any of these devices Two of the problems we encountered in our own work 2 in building VIs for different platforms were the different layout features and screen sizes associated with each platform and device Dan Ol sen 13 Peter Johnson 9 and Stephen Brewster et al 4 all talk about problems in interaction due to the diversity of interactive

platforms devices network services and applications They also talk about the problems associated with the small screen size of hand held devices In comparison to desk top computers hand held devices will always suffer from a lack of screen real estate so new metaphors of interaction have to be devised for such devices It is difficult to develop a multi platform user interface VI without duplicating development effort Developers now face the daunting task to build UIs that must work across multiple devices There have been some approaches towards solving this problem of multi platform VI development including XWeb 14 Building plastic interfaces 5 20 is one such method in which the VIs are designed to withstand variations of context of use while preserving usability
