Wolf-Rayet Stars: Observations, Physics, Evolution C. de Loore, A.J. Willis, 2012-12-06 The formative ideas for this symposium originated in 1978 at the IAU Symposium No 83 on Mass Loss and Evolution of O type Stars held at Qualicum Beach Vancouver Island Canada WR stars generally figure prominently in O star meetings and vice versa Following general approval by the IAU Executive Committee the initial ideas were cemented at a subsequent meeting IAU Colloquium No 59 on

The Effects of Mass Loss on Stellar Evolution held at Miramare Trieste Italy in 1980 which was attended by the majority of the present Scientific Organising Committee and at which meeting the outline programme for this symposium was formulated 1981 was considered an appropriate year in which to hold a meeting on WR stars since the last IAU Symposium devoted to this stellar class had been held a decade earlier in Buenos Aires IAU Symposium No 49 and during this intervening period a wealth of new observational material had been obtained for WR stars together with significant advances on the theoretical front The venue for this symposium was chosen from the requirement which can be inferred from the above that a meeting on hot stars take place in an appropriate sunny climate and followed upon the excellent suggestion of Dr C Firmani to hold the symposium in Mexico

Supernovae Stanford E. Woosley, 2012-12-06 Supernova explosions are not only important to the ecology of the universe seeding it among other things with the heavy elements necessary for the existence of life but they are also a natural laboratory in which a host of unique physical phenomena occur While still far from a complete understanding scientists have made great advances during the last twenty five years in understanding the nature and consequences of supernovae This book presents the state of supernova studies at the beginning of the 1990 s as reported at a two week meeting on the Santa Cruz campus of the University of California in July 1989 involving 177 astronomers and astrophysicists from 17 nations The 110 papers contained in this volume report all aspects of the field observations at all wavelengths from radio through gamma rays bolometric light curves and spectra neutrino observations the theory of stellar explosions multidimensional models for mixing nucleosynthesis calculations synthetic spectral modeling presupernova evolution supernova remnants supernova rates supernovae as standard candles the interaction of supernovae with their surroundings and constitute the most comprehensive and up to date treatment of SN 1987A currently available Astronomers and astronomy graduate students will find this an invaluable summary of the current state of supernova research The informed layperson or undergraduate astronomy student will also find it a useful introduction and guide to the literature in the subject
