Coastal Waters Of The World Trends Threats And Strategies:

Coastal Waters of the World Don Hinrichsen, 2013-03-19 Nearly 60% of the world's population lives and works within 100 miles of a coast and even those who don't are connected to the world's oceans through an intricate drainage of rivers and streams. Ultimately, the whole of humankind is coastal. *Coastal Waters of the World* is a comprehensive reference source on the state of the world's coastal areas. It focuses on the tremendous pressures facing coastal areas and the management systems and strategies needed to cope with them. Don Hinrichsen explores the origins and implications of three related issues: the overwhelming threats to our coastal resources and seas from population and pollution; the destruction of critical resources through unsustainable economic activity; and the inability of governments to craft and implement rational coastal management plans. Introductory chapters present a concise summary of our coastal problems, including coastal habitat degradation and the fisheries crisis, along with a discussion of better management options. Three case studies of successful coastal governance focus on some of the problems and bring to life potential solutions. Following that are regional profiles that provide detailed information on the main population resource and management challenges facing each of the world's thirteen major coastal waters and seas. The profiles are presented in a standard format to allow for ease of comparison between regions and accessibility of information. The book ends with a realistic and practical agenda for action that can be implemented immediately. Safeguarding these complex interlinked ecosystems is humanity's most challenging management job. *Coastal Waters of the World* will help raise our awareness of coastal area concerns and provide a constructive contribution to the ongoing debate over how to manage these ever-changing areas both for ourselves and for future generations. It will serve as a valuable reference tool and an up-to-date resource for policymakers, management specialists, and students interested in sustainable coastal governance. *Environmental Change and Security Project Report*, 2000

Coastal Reservoir Technology and Applications Shu-Qing Yang, 2022-02-18 *Coastal Reservoir Technology and Applications* presents the analyses showing that the world is not running out of water but water is running out of river mouths; we need to work to harness this resource. Compared with inland water storages and desalination technology, coastal reservoirs are a nature-based water solution without disturbing the environment. This book mainly answers the questions of what the coastal reservoir technology is, where we should construct coastal reservoirs, and how to supply sufficient high-quality and affordable water to the world with minimum environmental/social impacts. Chapter 1 reviews modes of water resources development in the history along with current problems and reasons. Chapter 2 discusses the definition of coastal reservoirs, its classifications and applications, and the SPP downstream water management strategy. Other chapters analyse water crisis in every continent as well as their water solutions. The possible coastal reservoir for each major river is suggested as well. Without freshwater, no one can survive. Likewise, without sufficient high-quality and affordable freshwater, no community can achieve sustainable development. However, water is also a killer when it is too much, floods too dirty.

pollution and too turbid Different from other books this resource shows how to solve these water problems Coastal reservoirs and SPP strategy are suggested to develop floodwater in a safe way in coastal and inland regions respectively Solution of water food energy ecosystem nexus needs a paradigm shift from upstream to downstream water management i e from mountainous dams to coastal reservoirs which conserves the precious clean freshwater in seawater environment Provides an analysis of every large river in the world to help users determine the feasibility of using a coastal reservoir in each location Presents a global coverage including case studies where this technology has already been implemented Authored by a world expert on coastal reservoirs with several patents in the area

Beyond Malthus Lester R. Brown, Gary Gardner, Brian Halweil, 2014-04-08 On the bicentennial of Malthus legendary essay on the tendency of population to grow more rapidly than the food supply this book examines the impacts of population growth on 19 global resources and services including food fresh water fisheries jobs education income and health Despite current hype of a birth dearth in parts of Europe and Japan the fact remains that human numbers are projected to increase by over 3 billion by 2050 Populations in rapidly growing nations are in danger of outstripping the carrying capacity of their natural support systems and governments in such situations will find it increasingly hard to respond to crises such as AIDS food and water shortages and mass unemployment Beyond Malthus examines methods such as the expansion of international family planning investment in educating young people in the developing world and promotion of a shift towards smaller families which will represent the most humane response to the possible ravages of the population explosion

Global Change and Integrated Coastal Management Nick Harvey, 2007-05-31 Most of the world s population lives close to the coast and is highly dependent on coastal resources which are being exploited at unsustainable rates These resources are being subject to further pressures associated with population increase and the globalization of coastal resource demand This is particularly so for the Asia Pacific region which contains almost two thirds of the world s population and most of the world s coastal megacities The region has globally important atmospheric and oceanic phenomena which affect world climate such as the Asian Monsoon and the El Ni o Southern Oscillation phenomena The Asia

Pacific region also has highly significant marine diversity but over the last few decades coastal resources such as mangroves coral reefs and fisheries have experienced large scale depletion The need to find appropriate management solutions to these and other coastal issues is made more complex by the need to take account of international scientific predictions for global climate change and sea level rise which will further impact on these coasts The idea for this book arose from a meeting of coastal scientists in Kobe Japan in May 2003 The meeting was organized by the Asia Pacific Network for Global Change Research APN an inter governmental network comprising 21 member countries for the promotion of global change research and links between science and policy making in the region

Vast Expanses Helen M. Rozwadowski, 2018-10-15 Much of human experience can be distilled to saltwater tears sweat and an enduring connection to the sea In *Vast Expanses* Helen M Rozwadowski weaves a cultural environmental and geopolitical history of that relationship a journey of tides and titanic forces reaching around the globe and across geological and evolutionary time Our ancient connections with the sea have developed and multiplied through industrialization and globalization a trajectory that runs counter to Western depictions of the ocean as a place remote from and immune to human influence Rozwadowski argues that knowledge about the oceans created through work and play scientific investigation and also through human ambitions for profiting from the sea has played a central role in defining our relationship with this vast trackless and opaque place It has helped us to exploit

marine resources control ocean space extend imperial or national power and attempt to refashion the sea into a more tractable arena for human activity But while deepening knowledge of the ocean has animated and strengthened connections between people and the world's seas to understand this history we must address questions of how by whom and why knowledge of the ocean was created and used and how we create and use this knowledge today Only then can we forge a healthier relationship with our future sea
