Handbook of the Biology of Aging Edward J. Masoro, Steven N. Austad, 2011-04-28 The Handbook of the Biology of Aging Sixth Edition provides a comprehensive overview of the latest research findings in the biology of aging. Intended as a summary for researchers, it is also adopted as a high level textbook for graduate and upper level undergraduate courses. The Sixth Edition is 20% larger than the Fifth Edition with 21 chapters summarizing the latest findings in research on the biology of aging. The content of the work is virtually 100% new. Though a selected few topics are similar to the Fifth Edition, these chapters are authored by new contributors with new information. The majority of the chapters are completely new in both content and authorship. The Sixth Edition places greater emphasis and coverage on competing and complementary theories of aging, broadening the discussion of conceptual issues. Greater coverage of techniques used to study biological issues of aging include computer modeling, gene profiling, and demographic analyses. Coverage of research on *Drosophila* is expanded from one chapter to four. New chapters on mammalian models discuss aging in relation to skeletal muscles, body fat, and carbohydrate metabolism, growth hormone, and the human female reproductive system. Additional new chapters summarize exciting research on stem cells and cancer, dietary restriction, and whether age-related diseases are an integral part of aging. The Handbook of the Biology of Aging Sixth Edition is part of the Handbooks on Aging series, including Handbook of the Psychology of Aging and Handbook of Aging and the Social Sciences, also in their 6th editions.

Handbook of Paper and Board Herbert Holik, 2013-03-25 Papermaking is a fascinating art and technology. The second edition of this successful 2 volume handbook provides a comprehensive view on the technical, economic, ecologic, and social background of paper and board. It has been updated, revised, and largely extended in depth and width, including the further use of paper and board in converting and printing. A wide knowledge basis is a prerequisite in evaluating and optimizing the whole process chain to ensure efficient paper and board production. The same is true in their application and end use. The book covers a wide range of topics: Raw materials required for paper and board manufacturing, such as fibers, chemical additives, and fillers; Processes and machinery applied to prepare the stock and to produce the various paper and board grades, including automation and trouble shooting; Paper converting and printing processes; book preservation; The different paper and board grades, as well as testing and analysing fiber suspensions, paper and board products, and converted or printed matters; Environmental and energy factors, as well as safety aspects. The handbook will provide professionals in the field, e.g. papermakers, as well as converters and printers, laymen, students, politicians, and other interested people with the most up to date and comprehensive information on the state of the art, techniques, and aspects involved in paper making, converting, and printing.
