Catastrophes Views Natural Human Sciences:

Catastrophes Andreas Hoppe, 2015-11-25 Scientific disciplines have their own view on catastrophes Here natural scientists engineers physicians as well as historians and social scientists define and discuss geo hazards and associated technical disasters natural disasters as a business case medicine and its catastrophes After war aspects of the Shoah are described with Gershom Sholem s Concept of Jewish Totality and the situation of Displaced Persons in Germany as well as the Nakba for Palestinians related to the happiness of Jews celebrating their new State of Israel The book also reminds of Hamburg s Flood Disaster in 1962 the Great East Japan Earthquake in 2011 and other historical catastrophes in Japan the Lisbon earthquake in 1755 and the Age of Enlightenment and the eruption of the Tambora in 1815 followed by the year without summer

A Theory of Catastrophe Bryan S. Turner, 2023-05-08 Sociology has developed theories of social change in the fields of evolution conflict and modernization viewing modern society as essentially unstable and conflict driven However it has not seriously studied catastrophe A Theory of Catastrophe develops a sociology of catastrophes comparing natural social and political causes and consequences and the social theories that might offer explanations A catastrophe is a general and systematic breakdown of social and political institutions resulting among other things in what we could call a catastrophe consciousness The Greek cata strophe formed the conclusion to a dramatic sequence of strophes The cata strophe was the final act of a drama namely its denouement Catastrophic denouements are without hope genocides military occupations plagues famines and earthquakes A Theory of Catastrophe analyzes Pompeii the Black Death colonial genocide in North America WWI and the Spanish Flu and Nazi Germany and finally this century terrorism new wars climate change and pandemics As a study of sociological theory Bryan Turner discusses Spengler s Decline of the West Marxism as a theory of catastrophic capitalism messianic movements Weber on modernity and risk society He concludes by comparing optimism and pessimism and the idea of inter generational justice

Campbell, 2024-11-08 The Encyclopedia of Technological Hazards and Disasters in the Social Sciences brings together an array of global experts to investigate explore and analyse human caused disaster events Providing insights into both the origins and aftermaths of disaster events it offers advanced understanding of a broad range of disaster events facing society during the Anthropocene

The Anthropology of

Disasters in Latin America Virginia García-Acosta, 2019-12-09 This book offers anthropological insights into disasters in Latin America. It fills a gap in the literature by bringing together national and regional perspectives in the study of disasters. The book essentially explores the emergence and development of anthropological studies of disasters. It adopts a methodological approach based on ethnography, participant observation, and field research to assess the social and historical constructions of disasters and how these are perceived by people of a certain region. This regional perspective helps assess long-term dynamics, regional capacities, and regional/global interactions on disaster sites. With chapters written by prominent Latin American anthropologists, this book also considers the role of the state and other nongovernmental organizations in managing disasters and the specific conditions of each country relative to a greater or lesser incidence of disastrous events. Globalizing the existing literature on disasters with a focus on Latin America, this book offers multidisciplinary insights that will be of interest to academics and students of geography, anthropology, sociology, and political science.

Disasters and the Small Dwelling Yasemin Aysan, 2013-10-18 This book contains the proceedings of the conferences on Disasters and the Small Dwelling held at Oxford in September 1990. The 26 papers cover recent experiences of post-disaster shelter and housing provision, review what has been achieved, what needs disseminating and implementing, and assesses what needs further development. The volume thus defines an international agenda to achieve safer low-income dwellings in the course of the 1990s, designated International Decade for Natural Disaster Reduction by the UN. It will be essential reading for anyone, whether governmental or non-governmental agency officials, academic researchers, representatives of private industry, or consultants whose work involves analysis, shelter mitigation, and reconstruction programmes for low-income dwellings in disaster-prone areas.

The Chernobyl, Fukushima Daiichi and Deepwater Horizon Disasters from a Natural Science and Humanities Perspective Volker Hoensch, 2022-07-01 In our everyday imaginations we use the laws of nature with their tremendous possibilities of technical progress for the benefit of mankind. The three catastrophes of Chernobyl (26 April 1986), Fukushima Daiichi (11 March 2011), and in the Gulf of Mexico, explosion of the drilling platform Deepwater Horizon (20 April 2010) have shaken this world view. Who directed this development? Is it a matter of human error or technical failure? For the answer, approaches from the natural sciences and the humanities are presented.

Disasters in World History Benjamin Reilly, 2024-08-27 Disasters in World History surveys the development of disaster studies as a discipline, as well as presenting historical case studies and theories used by historians to understand disasters. Disasters here defined as the complex interaction between natural hazards and specific human vulnerabilities have frequently left a mark on human history. Cataclysms have toppled dynasties, fueled massacres, and shaped the culture of societies frequently affected by natural hazards. This volume fosters understanding of such events by considering both social science theory and the natural science concepts relevant to disaster studies. In addition, the text makes heavy use of an emerging psychological theory relevant to disaster studies: the behavioral immune system, which helps to explain why xenophobic behavior and even violence often

erupt in the aftermath of disasters Chapters consider specific examples of disasters earthquakes tsunamis volcanic eruptions climate change including modern anthropogenic climate change or global warming and tropical cyclones This book is an accessible resource ideal for undergraduates and instructors in world history environmental history and disaster studies courses
