Difference Maker Christian Moore-Anderson, 2024-08-09 Rarely have I been so convinced by the power of a new theoretical underpinning for a pedagogical technique such as the one presented here Helen Darlington Faculty Progress Leader for Science at South Wirral High School reviewed in School Science Review From the author of Biology Made Real Difference Maker reveals how to teach with students rather than merely teach to them Without slides or worksheets it shows how to provoke understanding through diagrams and dialogue bringing forth a distinct teaching approach Inside you'll find The recursive teaching model An evidence and theory inspired model for co constructing meaning with students rather than just telling them or having them discover alone Detailed examples of real lessons The exact diagrams I've drawn in lessons and how I've built them step by step with students Plus the questions I've asked at what point in the lesson and why A theory informed how to guide for planning explanations How to explain biological concepts by applying the variation theory of learning and enactive cognitive science The resulting heuristic cuts planning time while vastly improving students understanding A theory informed how to guide for adaptive teaching Adapting is essential in the moment as you never know how students will interpret a new explanation With an original model for productive conversation I unveil the types of questions that generate understanding and rich feedback for the teacher These looping conversations trigger a coordinated co regulation between teacher and students ensuring mutual understanding before moving forward A theory informed how to guide for co constructing stock and flow diagrams There are several benefits 1 building these models clarifies your understanding to yourself and your students and 2 teaching becomes more conceptual conversational adaptive and enjoyable I show how to read design and teach with them through detailed lesson examples Plus an appendix of 37 diagrams I've used with my classes A new model of curricular content metacontent The curriculum is not just a list of content of equal weight There are fundamental ideas that give meaning to the rest of the

curriculum By including this metacontent in teaching a shared way of seeing and talking about our subjects emerges The first type of metacontent I explain is a set of principles that I share with students and discuss during every topic These unifying principles avoid the feeling that biology is just a lot of facts to learn The second type is understanding understanding itself I share a taxonomy of understanding that allows students to grasp what I expect of them in every topic I provide example sentences for each level of understanding questions I've asked to test my students understanding and answers my students have given A way of seeing and being Rather than a training manual with activities to follow this book provides teachers with a new conception of teaching learning and acting together in the classroom The novel insights of *Difference Maker* will inevitably change your perception [Living More Than Ok](#) Frank Coulson M.,2013-10-25 *Living More Than OK Spiraling Up To Abundant Living* Do you merely exist through each day Do you ask yourself is this all there is to life Then you are just living ok and that is not the way your life is meant to be *Living More Than OK Spiraling Up To Abundant Living* takes you on a reflective journey on aspects of Positive Psychology and other related concepts to help you to move beyond going through the motions to thriving with purpose and enjoying life to the full Topics that will be considered are Tapping Into Your Creativity Dream Big and Reach Your Goals Follow Your Purpose With Passion Aim For Natural Highs Thankfulness As A Lifestyle Take the risk today to begin *Living More Than OK* You were created to live a life that is flourishing and abundant Make the right choice to begin *Living More Than OK* **Depth** Michael Strevens,2011-09-30 What does it mean for scientists to truly understand rather than to merely describe how the world works Michael Strevens proposes a novel theory of scientific explanation and understanding that overhauls and augments the familiar causal approach to explanation What is replaced is the test for explanatorily relevant causal information Strevens discards the usual criterion of counterfactual dependence in favor of a criterion that turns on a process of progressive abstraction away from a fully detailed physical causal story The augmentations include the introduction of a new non causal explanatory relevance relation entanglement and an independent theory of the role of black boxing and functional specification in explanation The abstraction centered notion of difference making leads to a rich causal treatment of many aspects of explanation that have been either ignored or handled inadequately by earlier causal approaches including the explanation of laws and other regularities with particular attention to the explanation of physically contingent high level laws idealization in explanation and probabilistic explanation in deterministic systems as in statistical physics evolutionary biology and medicine The result is an account of explanation that has especially significant consequences for the higher level sciences biology psychology economics and other social sciences *Public Relations Leaders as Sensemakers* Bruce K.
