Computational modelling in production and medical technology, 2015 *XV Mediterranean Conference on Medical and Biological Engineering and Computing - MEDICON 2019* Jorge Henriques, Nuno Neves, Paulo de Carvalho, 2019-09-24 This book gathers the proceedings of MEDICON 2019 the XV Mediterranean Conference on Medical and Biological Engineering and Computing which was held in September 26-28 2019 in Coimbra Portugal A special emphasis has been given to practical findings techniques and methods aimed at fostering an effective patient empowerment i.e. to position the patient at the heart of the health system and encourages them to be actively involved in managing their own healthcare needs The book reports on research and development in electrical engineering computing data science and instrumentation and on many topics at the interface between those disciplines It provides academics and professionals with extensive knowledge on cutting edge techniques and tools for detection prevention treatment and management of diseases A special emphasis is given to effective advances as well as new directions and challenges towards improving healthcare through holistic patient empowerment

Computational Modelling of Nanomaterials Panagiotis Grammatikopoulos, 2020-09-30 Due to their small size and their dependence on very fast phenomena nanomaterials are ideal systems for computational modelling This book provides an overview of various nanosystems classified by their dimensions 0D nanoparticles QDs etc 1D nanowires nanotubes 2D thin films graphene etc 3D nanostructured bulk materials devices Fractal dimensions such as nanoparticle agglomerates percolating films and combinations of materials of different dimensionalities are also covered e.g. epitaxial decoration of nanowires by nanoparticles i.e. 0D 1D nanomaterials For each class the focus will be on growth structure and physical chemical properties The book presents a broad range of techniques including density functional theory molecular dynamics non equilibrium molecular dynamics finite element modelling FEM numerical modelling and meso scale modelling The focus is on each method's relevance and suitability for the study of materials and phenomena in the nanoscale This book is an important resource for understanding the mechanisms behind basic properties of nanomaterials and the major techniques for computational modelling of nanomaterials Explores the major modelling techniques used for different classes of nanomaterials Assesses the best modelling technique to use for each different type of nanomaterials Discusses the challenges of using certain modelling techniques with specific nanomaterials

Computational Biomechanics for Medicine Barry Doyle, Karol Miller, Adam Wittek, Poul M.F. Nielsen, 2014-05-24 One of the greatest challenges facing the computational engineering community is to extend the success of computational mechanics to fields outside traditional engineering in particular to biology the biomedical sciences and medicine The Computational Biomechanics for Medicine series provides an opportunity for specialists in computational biomechanics to present their latest methodologies and advancements This 5th edition

comprises nine of the latest developments in both fundamental science and patient specific applications from researchers in Australia New Zealand USA UK France Ireland and China Some of the interesting topics discussed are cellular mechanics tumor growth and modeling medical image analysis and both patient specific fluid dynamics and solid mechanic simulations

Bioprinting: Principles And Applications Wai Yee Yeong, Chee Kai Chua, 2014-11-27 At labs around the world researchers have been experimenting with bioprinting first just to see whether it was possible to push cells through a printhead without killing them in most cases it is and then trying to make cartilage bone skin blood vessels small bits of liver and other tissues There are other ways to try to engineer tissue one involves creating a scaffold out of plastics or other materials and adding cells to it In theory at least a bioprinter has advantages in manipulating control of the placement of cells and other components to mimic natural structures But just as the claims made for 3 D printing technology sometimes exceed the reality the field of bioprinting has seen its share of hype The reality is that although bioprinting researchers have made great strides there are many formidable obstacles to overcome Nobody who has any credibility claims they can print organs or believes in their heart of hearts that that will happen in the next 20 years but for operations like hip replacement advance in Bio printing has made customization of certain body parts possible This book will start from the concept of Tissue Engineering covering various approaches in Scaffolds for tissue engineering Bioprinting techniques and Materials for bioprinting Cell processing 3D cell culture techniques Computational design and simulation multi disciplinary approaches in bioprinting and finally cover the applications of bioprinting
