Defect Correction Methods Defect Correction Methods:

Defect Correction Methods K. Böhmer, H.J. Stetter, 2012-12-06 Ten years ago the term defect correction was introduced to characterize a class of methods for the improvement of an approximate solution of an operator equation. This class includes many well known techniques e.g. Newton's method but also some novel approaches which have turned out to be quite efficient. Meanwhile a large number of papers and reports scattered over many journals and institutions have appeared in this area. Therefore a working conference on Error Asymptotics and Defect Corrections was organized by K. Böhmer, V. Pereyra and H.J. Stetter at the Mathematisches Forschungsinstitut Oberwolfach in July 1983, a meeting which aimed at bringing together a good number of the scientists who are active in this field. Altogether 26 persons attended whose interests covered a wide spectrum from theoretical analyses to applications where defect corrections may be utilized. A list of the participants may be found in the Appendix. Most of the colleagues who presented formal lectures at the meeting agreed to publish their reports in this volume. It would be presumptuous to call this book a state of the art report in defect corrections. It is rather a collection of snapshots of activities which have been going on in a number of segments on the frontiers of this area. No systematic coverage has been attempted. Some articles focus strongly on the basic concepts of defect correction but in the majority of the contributions the defect correction ideas appear rather as instruments for the attainment of some specified goal.

Numerical Treatment of Coupled Systems Wolfgang Hackbusch, 2013-04-17 The GAMM Committee for Efficient Numerical Methods for Partial Differential Equations organizes seminars and workshops on subjects concerning the algorithmic treatment of partial differential equations. The topics are discretisation methods like the finite element and the boundary element method for various types of applications in structural and fluid mechanics. Particular attention is devoted to the advanced solution methods. The series of such seminars was continued in 1995 January 20-22 with the 11th Kiel Seminar on the special topic Numerical Treatment of Coupled Systems at the Christian Albrechts University of Kiel. The seminar was attended by 100 scientists from 9 countries. 23 lectures were given including two survey lectures. Different kinds of couplings are considered in this volume. The coupling of different components may occur in the physical model. On the other hand a coupling of subsystems can be generated by the numerical solution technique. General examples of the latter kind are the domain decomposition (see p. 128) or subspace decomposition (p. 117). The local defect correction method couples different discretizations of the same problem in order to improve the results although the basic linear system to be solved remains unchanged (p. 47). In general the aim of the numerical coupling is to make use of efficient subsystem solvers (p. 1). The combination of different discretization techniques is mentioned on page 59.

Multigrid Methods Stephen F. McCormick, 1987-12-01 A thoughtful consideration of the current level of development of multigrid methods. This volume is a carefully edited collection of papers that addresses its topic on several levels. The first

three chapters orient the reader who is familiar with standard numerical techniques to multigrid methods first by discussing multigrid in the context of standard techniques second by detailing the mechanics of use of the method and third by applying the basic method to some current problems in fluid dynamics The fourth chapter provides a unified development complete with theory of algebraic multigrid AMG which is a linear equation solver based on multigrid principles The last chapter is an ambitious development of a very general theory of multigrid methods for variationally posed problems Included as an appendix is the latest edition of the Multigrid Bibliography an attempted compilation of all existing research publications on multigrid

Defect Correction Methods for Fluid Flows at High Reynolds Numbers Alexander E. Labovsky, 2026 **Error Estimation and Adaptive Discretization Methods in Computational Fluid Dynamics** Timothy J. Barth, Herman Deconinck, 2013-04-17 As computational fluid dynamics CFD is applied to ever more demanding fluid flow problems the ability to compute numerical fluid flow solutions to a user specified tolerance as well as the ability to quantify the accuracy of an existing numerical solution are seen as essential ingredients in robust numerical simulation Although the task of accurate error estimation for the nonlinear equations of CFD seems a daunting problem considerable effort has centered on this challenge in recent years with notable progress being made by the use of advanced error estimation techniques and adaptive discretization methods To address this important topic a special course was jointly organized by the NATO Research and Technology Office RTO the von Karman Institute for Fluid Dynamics and the NASA Ames Research Center The NATO RTO sponsored course entitled Error Estimation and Solution Adaptive Discretization in CFD was held September 10-14 2002 at the NASA Ames Research Center and October 15-19 2002 at the von Karman Institute in Belgium During the special course a series of comprehensive lectures by leading experts discussed recent advances and technical progress in the area of numerical error estimation and adaptive discretization methods with specific emphasis on computational fluid dynamics The lecture notes provided in this volume are derived from the special course material The volume consists of 6 articles prepared by the special course lecturers

Domain Decomposition Methods in Science and Engineering Ralf Kornhuber, Ronald W. Hoppe, Jacques Periaux, Olivier Pironneau, Olof Widlund, Jinchao Xu, 2006-03-30 Domain decomposition is an active interdisciplinary research area that is devoted to the development analysis and implementation of coupling and decoupling strategies in mathematics computational science engineering and industry A series of international conferences starting in 1987 set the stage for the presentation of many meanwhile classical results on substructuring block iterative methods parallel and distributed high performance computing etc This volume contains a selection from the papers presented at the 15th International Domain Decomposition Conference held in Berlin Germany July 17-25 2003 by the world's leading experts in the field Its special focus has been on numerical analysis computational issues complex heterogeneous problems industrial problems and software development

Defect Correction Iteration and Splitting Methods for Time-dependent Partial Differential Equations P. J. van der Houwen, 1981 Management and Minimisation of Uncertainties and Errors

in Numerical Aerodynamics Bernhard Eisfeld, Holger Barnewitz, Willy Fritz, Frank Thiele, 2013-02-11 This volume reports results from the German research initiative MUNA Management and Minimization of Errors and Uncertainties in Numerical Aerodynamics which combined development activities of the German Aerospace Center DLR German universities and German aircraft industry The main objective of this five year project was the development of methods and procedures aiming at reducing various types of uncertainties that are typical of numerical flow simulations The activities were focused on methods for grid manipulation techniques for increasing the simulation accuracy sensors for turbulence modelling methods for handling uncertainties of the geometry and grid deformation as well as stochastic methods for quantifying aleatoric uncertainties **Library of Congress Subject Headings** Library of Congress, 2013
