Syslo, 2008-06-27 Informatics Education Supporting Computational Thinking contains papers presented at the Third International Conference on Informatics in Secondary Schools Evolution and Perspective ISSEP 2008 held in July 2008 in Torun Poland As with the proceedings of the two previous ISSEP conferences 2005 in Klagfurt Austria and 2006 in Vilnius Lithuania the papers presented in this volume address issues of informatics education transcending national boundaries and the fore transcending differences in the various

national legislation and organization of the educational system. Observing these issues one might notice a trend. The proceedings of the First ISSEP were termed 'From Computer Literacy to Informatics Fundamentals 1'. There broad room was given to general education in ICT. The ECDL, the European Computer Driving License, propagated since the late 1990s had penetrated school at this time already on a broad scale and teachers, parents as well as pupils were rather happy with this situation. Teachers had material that had a clear scope, was relatively easy to teach and especially easy to examine. Parents had the assurance that their children learn modern and relevant stuff and for kids the computer was sufficiently modern so that anything that had to do with computers was considered to be attractive. Moreover the difficulties of programming, marking the early days of informatics education in school, seemed no longer relevant. Some colleagues had a more distant vision though.
