Defeasible Deontic Logic Synthese Library:

Defeasible Deontic Logic Donald Nute, 2012-12-06 Relevant to philosophy law management and artificial intelligence these papers explore the applicability of nonmonotonic or defeasible logic to normative reasoning The resulting systems purport to solve well known deontic paradoxes and to provide a better treatment than classical deontic logic does of prima facie obligation conditional obligation and priorities of normative principles **Deontic Logic and Normative Systems** Fabrizio Cariani, Davide Grossi, Joke Meheus, Xavier Parent, 2014-06-30 This volume presents the refereed proceedings of the 12th International Conference on Deontic Logic and Normative Systems DEON 2014 held in Ghent Belgium in July 2014 The 17 revised papers and the 2 invited papers included in this volume were carefully reviewed and selected from 31 submissions Topics covered include challenges from natural language for deontic logic the relationship between deontic and other types of modality epistemic modality imperatives supererogatory etc the deontic paradoxes the modeling of normative concepts other than obligation and permission e g values the game theoretical aspects of deontic reasoning the emergence of norms norms from a conversational and pragmatic point of view and norms and argumentation Deontic Logic and Artificial Normative Systems Lou Goble, John-Jules Ch. Meyer, 2006-07-02 This book constitutes the refereed proceedings of the 8th International Workshop on Deontic Logic in Computer Science DEON 2006 held in Utrecht Netherlands in July 2006 Presents 18 revised full papers together with the abstracts of 3 invited talks The papers are devoted to the relationship between normative concepts and computer science artificial intelligence philosophy organization theory and law Special emphasis is placed on artificial normative systems **A Guided Tour of Artificial Intelligence Research** Pierre Marquis, Odile Papini, Henri Prade, 2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI Implementing reasoning or decision making processes requires an appropriate representation of the pieces of information to be exploited This first volume starts with a historical chapter sketching the slow emergence of building blocks of AI along centuries Then the volume provides an organized overview of different logical numerical or graphical representation formalisms able to handle incomplete information rules having exceptions probabilistic and possibilistic uncertainty and beyond as well as taxonomies time space preferences norms causality and even trust and emotions among agents Different types of reasoning beyond classical deduction are surveyed including nonmonotonic

reasoning belief revision updating information fusion reasoning based on similarity case based interpolative or analogical as well as reasoning about actions reasoning about ontologies description logics argumentation and negotiation or persuasion between agents Three chapters deal with decision making be it multiple criteria collective or under uncertainty Two chapters cover statistical computational learning and reinforcement learning other machine learning topics are covered in Volume 2 Chapters on diagnosis and supervision validation and explanation and knowledge base acquisition complete the volume

Deontic Logic in Computer Science Guido Governatori, Giovanni Sartor, 2010 Annotation This volume presents the refereed proceedings of the 10th International Conference on Deontic Logic in Computer Science DEON 2010 held in Fiesole Italy in July 2010 The 18 revised papers included in the volume were carefully reviewed and selected from 34 submissions Topics covered include connections preferences deontic logic and contrary to duties the use of input output logic the study of norm dynamics models of agents and institutions argumentation compliance and various alternative analyses of deontic notions

Norms, Logics and Information Systems Paul McNamara, Henry Prakken, 1999 This book presents research in an interdisciplinary field resulting from the vigorous and fruitful cross pollination between traditional deontic logic and computer science AI researchers have used deontic logic as one of the tools in modelling legal reasoning Computer scientists have discovered that computer systems including their interaction with other computer systems and with human agents can often be productively modelled as norm governed So for example deontic logic has been applied by computer scientists for specifying bureaucratic systems access and security policies and soft design or integrity constraints and for modelling fault tolerance In turn computer scientists and AI researchers have also discovered and made it clear to the rest of us that various formal tools e g nonmonotonic temporal and dynamic logics developed in computer science and artificial intelligence have interesting applications to traditional issues in deontic logic This volume presents some of the best work done in this area with the selection at once reflecting the general interdisciplinary and international character that this area of research has taken on as well as reflecting the more specific recent inter disciplinary developments between traditional deontic logic and computer science

Deontic Logic in Computer Science Thomas Agotnes, Jan M. Broersen, Dag Elgesem, 2012-07-11 This volume presents the refereed proceedings of the 11th International Conference on Deontic Logic in Computer Science DEON 2012 held in Bergen Norway in July 2012 The 14 revised papers included in the volume were carefully reviewed and selected from 29 submissions Topics covered include logical study of normative reasoning formal analysis of normative concepts and normative systems formal specification of aspects of norm governed multi agent systems and autonomous agents normative aspects of protocols for communication negotiation and multi agent decision making formal representation of legal

knowledge formal specification of normative systems for the management of bureaucratic processes in public or private administration and applications of normative logic to the specification of database integrity constraints *Computational Logic: Logic Programming and Beyond* Antonis C. Kakas, Robert Kowalski, 2002-07-12 This volume spans the whole field of

computational logic seen from the point of view of logic programming The topics addressed range from issues concerning the development of programming languages in logic and the application of computational logic to real life problems to philosophical studies of the field at the other end of the spectrum The articles presented cover the contributions of computational logic to databases and artificial intelligence with particular emphasis on automated reasoning reasoning about actions and change natural languages and learning Together with its companion volume LNAI 2407 this book commemorates the 60th birthday of Bob Kowalski as one of the founders of and contributors to computational logic Proceedings Of The 14th And 15th Asian Logic Conferences Byunghan Kim,Jorg Brendle,Gyesik Lee,Fenrong Liu,R Ramanujam,Shashi M Srivastava,Akito Tsuboi,Liang Yu,2019-01-15 The Asian Logic Conference ALC is a major international event in mathematical logic It features the latest scientific developments in the fields of mathematical logic and its applications logic in computer science and philosophical logic The ALC series also aims to promote mathematical logic in the Asia Pacific region and to bring logicians together both from within Asia and elsewhere for an exchange of information and ideas This combined proceedings volume represents works presented or arising from the 14th and 15th ALCs Dynamics and Management of Reasoning Processes John-Jules Meyer,Jan Treur,2001-12-31 This volume the 6th volume in the DRUMS Handbook series is part of the after math of the successful ESPRIT project DRUMS Defeasible Reasoning and Uncertainty Management Systems which took place in two stages from 1989 1996 In the second stage 1993 1996 a work package was introduced devoted to the topics Reasoning and Dynamics covering both the topics of Dynamics of Reasoning where reasoning is viewed as a process and Reasoning about Dynamics which must be understood as pertaining to how both designers of and agents within dynamic systems may reason about these systems The present volume presents work done in this context This work has an emphasis on modelling and formal techniques in the investigation of the topic Reasoning and Dynamics but it is not mere theory that occupied us Rather research was aimed at bridging the gap between theory and practice Therefore also real life applications of the modelling techniques were considered and we hope this also shows in this volume which is focused on the dynamics of reasoning processes In order to give the book a broader perspective we have invited a number of well known researchers outside the project but working on similar topics to contribute as well We have very pleasant recollections of the project with its lively workshops and other meetings with the many sites and researchers involved both within and outside our own work package
