Deformations Of Algebraic Schemes Deformations Of Algebraic Schemes:

Deformations of Algebraic Schemes Edoardo Sernesi, 2007-04-20 In one sense deformation theory is as old as algebraic geometry itself this is because all algebro geometric objects can be deformed by suitably varying the coefficients of their defining equations and this has of course always been known by the classical geometers Nevertheless a correct understanding of what deforming means leads into the technically most difficult parts of our discipline It is fair to say that such technical obstacles have had a vast impact on the crisis of the classical language and on the development of the modern one based on the theory of schemes and on cohomological methods The modern point of view originates from the seminal work of Kodaira and Spencer on small deformations of complex analytic manifolds and from its formalization and translation into the language of schemes given by Grothendieck I will not recount the history of the subject here since good surveys already exist e g [27, 138, 145, 168] Today while this area is rapidly developing a self contained text covering the basic results of what we can call classical deformation theory seems to be missing Moreover a number of technicalities and well known facts are scattered in a vast literature as folklore sometimes with proofs available only in the complex analytic category This book is an attempt to fill such a gap at least partially

Deformations of Algebraic Schemes Edoardo Sernesi, 2009-09-02 This account of deformation theory in classical algebraic geometry over an algebraically closed field presents for the first time some results previously scattered in the literature with proofs that are relatively little known yet relevant to algebraic geometers Many examples are provided Most of the algebraic results needed are proved The style of exposition is kept at a level amenable to graduate students with an average background in algebraic geometry

Deformations of Algebraic Schemes Edoardo Sernesi, 2006 The study of small and local deformations of algebraic varieties originates in the classical work of Kodaira and Spencer and its formalization by Grothendieck in the late 1950 s It has become increasingly important in algebraic geometry in every context where variational phenomena come into play and in classification theory e g the study of the local properties of moduli spaces Today deformation theory is highly formalized and has ramified widely within mathematics This self contained account of deformation theory in classical algebraic geometry over an algebraically closed field brings together for the first time some results previously scattered in the literature with proofs that are relatively little known yet of everyday relevance to algebraic geometers Based on Grothendieck's functorial approach it covers formal deformation theory algebraization isotriviality Hilbert schemes Quot schemes and flag Hilbert schemes It includes applications to the construction and properties of Severi varieties of families of plane nodal curves space curves deformations of quotient singularities Hilbert schemes of points local Picard functors etc Many examples are provided Most of the algebraic results needed are proved The style of exposition is kept at a level amenable to graduate students with an average background in algebraic geometry

Deformation Theory Robin Hartshorne, 2009-11-12 In the fall semester of 1979 I gave a course on deformation theory at Berkeley My goal was to understand completely Grothendieck's local study of the

Hilbert scheme using the cohomology of the normal bundle to characterize the Zariski tangent space and the obstructions to deformations. At the same time I started writing lecture notes for the course. However the writing project soon foundered as the subject became more intricate and the result was no more than five of a projected thirteen sections corresponding roughly to sections 1, 2, 3, 5, 6 of the present book. These handwritten notes circulated quietly for many years until David Eisenbud urged me to complete them and at the same time without consulting me mentioned to an editor at Springer. You know Robin has these notes on deformation theory which could easily become a book. When asked by Springer if I would write such a book I immediately refused since I was then planning another book on space curves. But on second thought I decided this was after all a worthy project and that by writing I might finally understand the subject myself. So during 2004 I expanded the old notes into a rough draft which I used to teach a course during the spring semester of 2005. Those notes rewritten once more with the addition of exercises form the book you are now reading.

My goal in this book is to introduce the main ideas of deformation theory in

algebraic geometry and to illustrate their use in a number of typical situations. *Deformation of Artinian Algebras and Jordan Type* Anthony Iarrobino, Pedro Macias Marques, Maria Evelina Rossi, Jean VallŠs, 2024-09-06. This volume contains the proceedings of the AMS EMS SMF Special Session on Deformations of Artinian Algebras and Jordan Type held July 18–22, 2022 at the Universit Grenoble Alpes, Grenoble, France. Articles included are a survey and open problems on deformations and relation to the Hilbert scheme, a survey of commuting nilpotent matrices and their Jordan type, and a survey of Specht ideals and their perfection in the two-rowed case. Other articles treat topics such as the Jordan type of local Artinian algebras, Waring decompositions of ternary forms, questions about Hessians, a geometric approach to Lefschetz properties, deformations of codimension two local Artin rings using Hilbert–Burch matrices, and parametrization of local Artinian algebras in codimension three. Each of the articles brings new results on the boundary of commutative algebra and algebraic geometry.

Deformation Theory of Algebras and Their Diagrams Martin Markl, 2012. This book brings together both the classical and current aspects of deformation theory. The presentation is mostly self-contained, assuming only basic knowledge of commutative algebra, homological algebra, and category theory. In the interest of readability, some technically complicated proofs have been omitted when a suitable reference was available. The relation between the uniform continuity of algebraic maps and topologized tensor products is explained in detail, however, as this subject does not seem to be commonly known and the literature is scarce. The exposition begins by recalling Gerstenhaber's classical theory for associative algebras. The focus then shifts to a homotopy-invariant setup of Maurer–Cartan moduli spaces. As an application, Kontsevich's approach to deformation quantization of Poisson manifolds is reviewed. Then, after a brief introduction to operads, a strongly homotopy Lie algebra governing deformations of diagrams of algebras of a given type is described, followed by examples and generalizations. *Deformation and Unobstructedness of Determinantal Schemes* Jan O. Kleppe, Rosa M.

Miró-Roig,2023-06-22 [View the abstract](#) *Encyclopaedia of Mathematics* M. Hazewinkel,2013-12-01 *Deformation Theory* Robin Hartshorne,2009-12-10 The basic problem of deformation theory in algebraic geometry involves watching a small deformation of one member of a family of objects such as varieties or subschemes in a fixed space or vector bundles on a fixed scheme In this new book Robin Hartshorne studies first what happens over small infinitesimal deformations and then gradually builds up to more global situations using methods pioneered by Kodaira and Spencer in the complex analytic case and adapted and expanded in algebraic geometry by Grothendieck The author includes numerous exercises as well as important examples illustrating various aspects of the theory This text is based on a graduate course taught by the author at the University of California Berkeley **Encyclopaedia of Mathematics** Michiel Hazewinkel,2013-12-01
