Degradable Aliphatic Polyesters Volume 157 Degradable Aliphatic Polyesters Volume 157:

Degradable Aliphatic Polyesters A.-C. Albertsson, 2003-07-03 A renewed interest in aliphatic polyesters has resulted in developing materials important in the biomedical and ecological fields. Mainly materials such as PLA and PCL homopolymers have so far been used in most applications. There are many other monomers which can be used. Different molecular structures give a wider range of physical properties as well as the possibility of regulating the degradation rate. By using different types of initiators and catalysts, ring opening polymerization of lactones and lactides provides macromolecules with advanced molecular architectures. In the future, new degradable polymers should be able to participate in the metabolism of nature. Some examples of novel polymers with inherent environmentally favorable properties such as renewability and degradability and a series of interesting monomers found in the metabolisms and cycles of nature are given. **The**

Chemistry of Bio-based Polymers Johannes Karl Fink, 2020-01-22 The recent explosion of interdisciplinary research has fragmented the knowledge base surrounding renewable polymers. The Chemistry of Bio based Polymers 2nd edition brings together in one volume the research and work of Professor Johannes Fink focusing on biopolymers that can be synthesized from renewable polymers. After introducing general aspects of the field, the book's subsequent chapters examine the chemistry of biodegradable polymeric types sorted by their chemical compounds including the synthesis of low molecular compounds. Various categories of biopolymers are detailed including vinyl based polymers, acid and lactone polymers, ester and amide polymers, carbohydrate related polymers and others. Procedures for the preparation of biopolymers and biodegradable nanocomposites are arranged by chemical methods and in vitro biological methods with discussion of the issue of plastics from bacteria. The factors influencing the degradation and biodegradation of polymers used in food packaging exposed to various environments are detailed at length. The book covers the medical applications of bio based polymers concentrating on controlled drug delivery, temporary prostheses and scaffolds for tissue engineering. Professor Fink also addresses renewable resources for fabricating biofuels and argues for localized biorefineries as biomass feedstocks are more efficiently handled locally. **Functional Fluorescent Materials** Vivek Mishra, Syed Sibtey Razi, Ajit Kumar, 2024-06-17

Functional Fluorescent Materials Applications in Sensing, Bioimaging and Optoelectronics explains functional molecular probes, organic/inorganic materials, polymers, nanomaterials with a focus on those that represent spectroscopic properties with detection of different analytes and specific roles in molecular recognition and their applications. It broadly covers molecular recognition to applications of fluorescence reporters starting from optoelectronic properties of materials, detection of heavy metals through biological macromolecules and further to a living cell, tissue imaging and theranostics. Features: Covers different aspects of fluorescence spectroscopy ranging from chemical, physical and biological aspects along with optoelectronic properties, mechanisms and applications. Describes all types of chemical and functionalized fluorescent nanomaterials. Provides additional information on different kinds of fluorescence reporters. Explains the concept of

fluorescence spectroscopy and its role in human health care Discusses changes in static and dynamic properties of fluorescent probes and molecular recognitions This book is aimed at graduate students and researchers in materials chemical engineering and engineering physics
