Design Guide for Precast Uhpc Waffle Deck Panel System, Including Connections U.s. Department of Transportation,2014-01-21 As a part of an innovation project funded by the Federal Highway Administration FHWA Highways for LIFE program a full depth precast ultra high performance concrete UHPC waffle deck panel and appropriate connections suitable for field implementation of waffle decks were developed **Design Guide for Precast UHPC Waffle Deck Panel System, Including Connections** Sriram Aaleti,Bradley Petersen,Sri Sritharan,Iowa State University. Bridge Engineering Center,2013 As a part of an innovation project funded by the Federal Highway Administration FHWA Highways for LIFE program a full depth precast ultra high performance concrete UHPC waffle deck panel and appropriate connections suitable for field implementation of waffle decks were developed Following a successful full scale validation test on a unit consisting of two panels with various types of connections under laboratory conditions the waffle deck was installed successfully on a replacement bridge in Wapello County Iowa The subsequent load testing confirmed the desirable performance of the UHPC waffle deck bridge Using the lessons from the completed project and outcomes from a series of simple and detailed finite element analyses of waffle decks this report was developed to serve as a guide for broadening the design and installation of the UHPC waffle deck panel in new and existing bridges Following an introduction to UHPC and waffle deck panels and a summary of completed work this document presents information on waffle deck design design of connections redecking using waffle deck panels and guidance on precast fabrication construction and installation of UHPC waffle deck panels Building for the Future: Durable, Sustainable, Resilient Alper Ilki,Derya Çavunt,Yavuz Selim Çavunt,2023-07-04 This book presents the proceedings of the fib Symposium Building for the future Durable Sustainable Resilient held in Istanbul Turkey on 5 7 June 2023 The book covers topics such as concrete and innovative materials structural performance and design construction methods and management and outstanding structures fib The International Federation for Structural Concrete is a not for profit association whose mission is to develop at an international level the study of scientific and practical matters capable of advancing the technical economic aesthetic and environmental performance of concrete construction **Recent Developments and Innovations in the Sustainable Production of Concrete** Afzal Husain Khan,Mohammad Nadeem Akhtar,Khaldoon A. Bani-Hani,2024-11-18 Recent Developments and Innovations in the Sustainable Production of Concrete covers the various aspects of sources materials and waste products in concrete production innovation in materials new technological developments and the upgradation of existing concrete production systems Importantly it covers the so called EEE aspects Economy Energy and Environment not touched by other books The books also highlights the sustainability aspects of concrete production when recycled materials are added Case studies are used to demonstrate the practical aspect of concrete production including the machine learning approach Includes coverage of sources materials and waste products in concrete production Provides an overview of the economic

energy and environment aspects in concrete production Shows how machine learning can be used in concrete construction

Use of Precast Concrete Deck Panels ,1999 **NU-DECK Precast Deck Panels & Innovative Bridge Research and Construction** Maher K. Tadros,2004 *Proposed Design Criteria on Thin-Wall Precast Panels for Hydraulic Concrete Structures* ,2003 This report addresses many of the design issues that designers will face with respect to thin wall precast concrete panels as the U S Army Corps of Engineers continues with its innovative approach to construction of navigation structures using lift in float in and in the wet construction methods The report focuses on the issues of concrete panel design that relate to the special considerations associated with the innovative methods currently being used by the Corps This report is intended to supplement guidance criteria currently available in Engineer Manuals and Engineer Technical Letters as well as the industry standards such as the American Concrete Institute s building code and the American Association of State Highway and Transportation Officials Bridge Code Special consideration is given to the applicability of thin wall precast panels the materials used in their construction and constructibility issues associated with them Other topics that are addressed include loads to consider during precast operations considerations with regard to connection of precast items issues associated with in fill concrete and requirements and guidelines regarding construction details Several chapters of the report are devoted to issues that are directly related to design such as serviceability requirements strength requirements flexural design shear and torsion design and fatigue strength design Finally information is presented on design with respect to composite construction and loading combinations that should be considered for thin wall panels *Recommendations for the Use of Precast Deck Panels at Expansion Joints* ,2008 **Design Guidelines for Wall Panel Connections** Matej Fischinger,Tatjana Isaković,Blaž Zoubek (gradbenik.),Jože Lopatič,2016 The current design practice of precast buildings is based on a frame mode where the peripheral cladding panels enter only as masses without any stiffness The panels are then connected to the structure with fastenings dimensioned with a local calculation on the basis of their mass for anchorage forces orthogonal to the plane of the panels This design approach does not work as it was recently dramatically shown by several recent violent shakes like L Aquila Italy in 2009 Grenada Spain in 2010 and Emilia Italy in 2012 The panels fixed in this way to the structure come to be integral part of the resisting system conditioning its seismic response The high stiffness of this resisting system leads to forces much higher than those calculated from the frame model These forces are related to the global mass of the floors and are primarily directed in the plane of the walls Furthermore the seismic force reduction in the type of precast structures of concern relies on energy dissipation in plastic hinges formed in the columns Very large drifts of the columns are needed to activate this energy dissipation foreseen in design However typically the capacity of the connections between cladding and structure is exhausted well before such large drifts can develop Therefore the design of these connections cannot rely on the seismic reduction factor used for design of the bare structure New technological solutions for connectors with proper design approaches were urgently required The research project SAFECLADDING was

thus aimed at investigating by means of a balanced combination of experimental and analytical activity the seismic behaviour of precast structures with cladding wall panels and at developing innovative connection devices and novel design approaches for a correct conception and dimensioning of the fastening system to guarantee good seismic performance of the structure throughout its service life The final outcome of the SAFECLADDING project is represented by a set of documents providing the design guidelines produced by the consortium The guidelines have a theoretical derivation supported by the experimental results of the testing campaigns and numerical simulations performed within the project General know how on production practice and international literature on the subject have been also considered The present document provides the design guidelines for the wall panel connections A companion document provides the design guidelines for precast structures with cladding panels
