The Dialectic Relation Between Physics and Mathematics in the XIXth Century Evelyne Barbin,Raffaele Pisano,2013-04-02 The aim of this book is to analyse historical problems related to the use of mathematics in physics as well as to the use of physics in mathematics and to investigate Mathematical Physics as precisely the new discipline which is concerned with this dialectical link itself So the main question is When and why did the tension between mathematics and physics explicitly practised at least since Galileo evolve into such a new scientific theory The authors explain the various ways in which this science allowed an advanced mathematical modelling in physics on the one hand and the invention of new mathematical ideas on the other hand Of course this problem is related to the links between institutions universities schools for engineers and industries and so it has social implications as well The link by which physical ideas had influenced the world of mathematics was not new in the 19th century but it came to a kind of maturity at that time Recently much historical

research has been done into mathematics and physics and their relation in this period The purpose of the Symposium and this book is to gather and re evaluate the current thinking on this subject It brings together contributions from leading experts in the field and gives much needed insight in the subject of mathematical physics from a historical point of view

The Language of Physics Elizabeth Garber, 2012-12-06 This study began as an attempt to understand mechanics in the nineteenth century The terms mechanics and mechanical world view were being used as general descriptions of nineteenth century physicists assumptions and interpretations of nature However there were no studies of the particulars of these assumptions or the range and content of these interpretations Rene Dugas work on classical mechanics focused on France The search for the particulars of these forms of mechanics led me to explore precisely what mechanics meant to physicists of a century and more ago However none of Lagrange s Hamilton s or Jacobi s mechanics while elegant fits easily within the history of physics Lagrange reduced mechanics to an exercise in analysis Hamilton and Jacobi used mechanics to explore solutions to partial differential equations They were mathematicians doing mathematics As I went deeper into the matter it became obvious that in the nineteenth century there were two kinds of mechanics each containing a variety of forms one physical the other mathematical There were a group of men using mechanics to understand nature and another group using the equations of mechanics to explore the calculus However when tracing these two traditions back into the eighteenth century physics disappeared altogether
