Concorde Story Of A Supersonic Pioneer:

Concorde Kenneth Owen, 2001 This book is an attempt to explain the technology of the world's most beautiful aeroplane both for those with a professional interest and for the general reader So began the introduction to the classic Concorde New Shape in the Sky the original edition of this book published in 1982 The story is here brought up to date for the new millennium covering some 20 years continued airline service a decade of research effort to explore the prospects for a second generation supersonic transport SST and the crucial implications of the tragic accident at Gonesse France on 25 July 2000 The story of the world's only successful supersonic transport is told largely in the words of the participants the scientists designers and engineers pilots civil servants and managers Their words bring the project to life their achievement is unique Neither of the rival contenders matched this success The planned American SST had been aborted by the US Congress in 1971 and the Russian rival the Tupolev Tu 144 failed in service though ironically it re-emerged in 1996-99 as a supersonic flying laboratory for the American High Speed Research programme In a new final chapter the book traces the sequence of events leading to the July 2000 accident at Gonesse and describes the outcome of the meticulous investigation that followed The author concludes by drawing together the main lessons to be learned from the truly heroic endeavour that is the Concorde project

Concorde, A Designer's Life Ted Talbot, 2013-09-01 Do you remember the time we used to do New York in three hours Even twenty years after its final flight Concorde remains the pinnacle of aviation design The aircraft is still unmatched which has led to a vast swathe of material being written about the aeroplane itself However relatively little has been said about the people who designed it Concorde A Designer's Life is an autobiography peppered with anecdotes from the team humorous life stories and several technibits all covering the design period of Concorde Ted Talbot who began his career at BAC as an aerodynamicist and later became chief design engineer has combined the technical narrative with personal and family reminiscences to remind the reader that engineers have lives too The path to Mach 2 was bumpy with threats of cancellation and opposition from the Americans and the Russians but this generally indicated to the Concorde team that they were on the right path This informative witty and thoroughly enjoyable peek into an unusual life is a valuable addition to any bookshelf

Transport and Its Place in History David Turner, 2020-06-07 Transport and mobility history is one of the most exciting

areas of historical research at the present. As its scope expands, it entices scholars working in fields as diverse as historical geography, management studies, sociology, industrial archaeology, cultural and literary studies, ethnography and anthropology, as well as those working in various strands of historical research. Containing contributions exploring transport and mobility history after 1800, this volume of eclectic chapters shows how new subjects are explored, new sources are being encountered, considered and used, and how increasingly diverse and innovative methodological lenses are applied to both new and well-travelled subjects. From canals to Concorde, from freight to passengers, from screen to literature, the contents of this book will therefore not only demonstrate the cutting edge of research and deliver valuable new insights into the role and position of transport and mobility in history, but it will also evidence the many and varied directions and possibilities that exist for the field's future development.

High-Speed Dreams Erik M. Conway, 2008-11-03. In *High Speed Dreams* Erik M. Conway constructs an insightful history that focuses primarily on the political and commercial factors responsible for the rise and fall of American supersonic transport research programs. Conway charts commercial supersonic research efforts through the changing relationships between international and domestic politicians, military, NASA, contractors, private investors and environmentalists. He documents post-World War II efforts at the National Advisory Committee on Aeronautics and the Defense Department to generate supersonic flight technologies, the attempts to commercialize these technologies by Britain and the United States during the 1950s and 1960s, environmental campaigns against SST technology in the 1970s, and subsequent attempts to revitalize supersonic technology at the end of the century. *High Speed Dreams* is a sophisticated study of politics, economics, nationalism and the global pursuit of progress. Historians, along with participants in current aerospace research programs, will gain valuable perspective on the interaction of politics and technology.

In Turbulent Skies Peter Reese, 2020-01-24. In 1945 confidence in British aviation was sky-high. Yet decades later the industry had not lived up to its potential. What happened? The years that followed the war saw the Brabazon Committee issue flawed proposals for civil aviation planning. Enforced cancellations restricted the advancement of military aircraft, compounded later on by Defence Minister Duncan Sandys abandoning aircraft to fixate solely on missiles. Commercially, Britain's small and neglected domestic market hindered the development of civilian airliners. In the production of notorious aircraft, the inauspicious Comet came from de Havilland's attempts to gain an edge over its American competitors. The iconic Harrier jump jet and an indigenous crop of helicopters were squandered while unrealistic performance requirements brought about the cancellation of TSR2. Peter Reese explores how repeated financial crises, a lack of rigour and fatal self-satisfaction led British aviation to miss vital opportunities across this turbulent period in Britain's skies.

One Hundred Years of Air Power and Aviation Robin Higham, 2003. In this precise interpretive and informative volume, Higham looks at everything from the roots of strategic bombing and tactical air power to the lessons learned and

unlearned during the invasion of Ethiopia the war in China and the Spanish Civil War He also considers the problems posed by jet aircraft in Korea and the use of Patriot missiles in the Persian Gulf He covers anti guerrilla operations doctrine industrial activities and equipment as well as the development of commercial airlines Civil Aviation and the Globalization of the Cold War Peter Svik, 2020-08-10 This book focuses on the highly complex and intertwined relationship between civil aviation technological globalization and Cold War politics It explores how the advancement of Soviet civil aircraft engineering during the 1950s technically triggered the globalization of the Cold War The study also shows how the processes of technological standardization facilitated transfers of technology and knowledge across the Iron Curtain and how East West as well as East South connections evolved It uncovers the motives and reasons for this transfer of knowledge and expertise and aims to identify the specific roles played by states international organizations and interpersonal networks By taking a global approach to this history the book advances ongoing debates in the field It reassesses Europe's role in the Cold War pointing out the substantial differences in how Western Europe and the United States viewed the Communist world This book will be of interest to scholars of international history the history of technology and Cold War history
