Atlas of Cutaneous Lymphomas Joi B. Carter, Amrita Goyal, Lyn McDivitt Duncan, 2015-06-20 This atlas contains excellent clinical and histopathologic images and text of each of the types of cutaneous lymphoma around 25 entities It is the first go to text for those who are considering a diagnosis of cutaneous lymphoma in their differential diagnosis The text also includes diagnostic mimics of lymphoma and differential diagnosis tables and algorithms The target audience is general practitioners dermatologists pathologists and students residents and fellows The diagnosis of lymphoma in the skin is confounded by the myriad of disorders that can mimic lymphoma clinically and histopathologically and by inconsistencies in the diagnostic classification that have only recently been resolved In the last decade the European Organization for Research and Treatment of Cancer EORTC Cutaneous Lymphoma Group and the World Health Organization WHO Collaborated in a series of workshops and consensus meetings to arrive at a definitive classification scheme for cutaneous lymphoma Unfortunately the publication by the WHO that described this schema included all lymphomas and has the skin tumors scattered throughout the volume There is currently no go to text for those who are considering a diagnosis of cutaneous lymphoma in their differential diagnosis As a result there continues to be confusion about the diagnosis of cutaneous lymphoma although this classification scheme was published in 2008
