Computational Intelligence and Mathematics for Tackling Complex Problems 2 María Eugenia Cornejo, László T. Kóczy, Jesús Medina-Moreno, Juan Moreno-García, 2022-01-15 This book collects the final versions of the highest quality papers presented at the conference 11th European Symposium on Computational Intelligence and Mathematics held on October 2 5 2019 in Toledo Spain The conjugation of computational sciences with different mathematical tools is essential in order to solve different challenges that arise in a wide ranging knowledge areas Nowadays many promising research lines are being developed in this direction from the theoretical and applicational perspectives In this publication computational intelligence and mathematics are combined in interesting research works that aim to give answers to complex real problems Moreover the technical program of this conference included four excellent keynote speeches given by Prof Jos Luis Verdegay Guidelines to solve Decision Making Problems Prof Joao Paulo Carvalho Recommender Systems Using Fuzzy Fingerprints for Proper Recommendations Dr Andreja Tepavcevic Special lattice valued structures and approximate solutions of linear equations and Prof Juan Moreno Garcia Generating linguistic descriptions using Linguistic Petri Nets

Computational Intelligence and Mathematics for Tackling Complex Problems László T Kóczy, Jesús Medina-Moreno, Eloísa Ramírez-Poussa, Alexander Šostak, 2019-05-02 This book combines computational intelligence and mathematics to solve theoretical and real world problems The real challenges of engineering and other applied sciences e g economics and management the social sciences etc and even everyday life are increasingly raising complex problems both in the usual sense but also in the mathematical and theoretical computer science sense which is referred to as intractability Finding exact solutions to the latest problems in mathematics is impossible and it has been also shown that no further technical advance will ever make it possible to find general and exact solutions to such

complex problems. Rather the goal is to find solutions that are good enough or acceptably accurate including models and corresponding algorithms which is most often achieved by combining traditional mathematical techniques and computational intelligence tools such as fuzzy systems evolutionary and memetic algorithms and artificial neural networks. Consequently international funding programs such as the European Commission's current framework program for research and innovation Horizon 2020 and the preliminary research team building COST Actions are devoted to developing new instruments for tackling the challenges that we face in the current technological age. And it goes without saying that research topics concerning the interactions between computational intelligence and traditional mathematics play a key role in overcoming the obstacles associated with the intractability of complex problems. In this book mathematicians engineers and other scientists highlight novel methodological results connecting these two main research areas and focusing on solving real life problems.
