processor is overviewed to discuss what quantity we can use to measure the efficiency of these processors The proposed quantity is the ratio between the minimum possible energy consumption and the actual energy consumption for a given application using a given semiconductor technology In chapter 3 whether or not this quantity can be used in practice is discussed for many real world applications In chapter 4 general purpose processors in the past and present are discussed from this viewpoint In chapter 5 how we can actually design processors with near optimal efficiencies is described and in chapter 6 how we can program such processors This book gives a new way to look at the field of the design of high performance processors Computer Organization and Design MIPS Edition David A.
