Concepts of Modern Catalysis and Kinetics I. Chorkendorff, J. W. Niemantsverdriet, 2017-10-16 In the past 12 years since its publication Concepts of Modern Catalysis and Kinetics has become a standard textbook for graduate students at universities worldwide Emphasizing fundamentals from thermodynamics physical chemistry spectroscopy solid state chemistry and quantum chemistry it introduces catalysis from a molecular perspective and stresses how it is interwoven with the field of reaction kinetics The authors go on to explain how the world of reacting molecules is connected to the real world of industry by discussing the various scales nano micro macro that play a role in catalysis Reflecting the modern day focus on energy supplies this third edition devotes attention to such processes as gas to liquids coal to liquids biomass conversion and hydrogen production From reviews of the prior editions Overall this is a valuable book that I will use in teaching undergraduates and postgraduates *Angewandte Chemie* I E this excellent book is highly recommended to students at technical universities but also entrants in chemical industry Furthermore this informative handbook is also a must for all professionals in the community AFS I am impressed by the coverage of the book and it is a valuable addition to the catalysis literature and I highly recommend purchase *Energy Sources*

Concepts of Modern Catalysis and Kinetics I. Chorkendorff, J. W. Niemantsverdriet, 2006-03-06 Until now the literature has offered a rather limited approach to the use of fundamental kinetics and their application to catalytic reactions Subsequently this book spans the full range from fundamentals of kinetics and heterogeneous catalysis via modern experimental and theoretical results of model studies to their equivalent large scale industrial production processes The result is key knowledge for students at technical universities and professionals already working in industry such an enterprise will be of great value to the community to professionals as well as graduate and undergraduate students attempting to move into the field of modern catalysis and kinetics I strongly recommend you publish this book based on the proposal Prof Dr G A Samorjai University of California Both authors are well respected specialists with a very long record of original top quality work and an international reputation A book from these authors will be considered an authoritative piece of work I definitely support this project and I am looking forward to use the book when published Prof Dr D E Resasco University of Oklahoma I wholly support the proposed project The authors are very competent young colleagues and there is a real need for such a textbook Prof Dr G Ertl Fritz Haber Institut Max Planck Gesellschaft Berlin
