

Laboratory: Organic Molecule Models

(This lab was developed by Laura Sonnichsen and modified by Laura Sonnichsen and Virginia Lehmann.)

Report Requirement: Answer all of the questions/do all the computations requested in *italics*. Questions not in italics do NOT need to be answered. You do NOT have to write a formal lab report. You should write your answers into a word processing program and save the file either as a Rich Text Format (.rtf) or html file. Go into the Lab – Organic Molecules Report and cut and paste the answers to each question in the appropriate space. (Lab – Organic Molecules Report can be found on the Content page or under Assignments → Quizzes.)

There is also a drop box for questions 2, 3, 4, 6 & 7. For questions 2, 3, 4 & 7 either neatly hand-draw the structures and then scan to a .pdf file or take a picture and save as a .jpg file OR type your structures in a document and save as .html, .rtf or .pdf file. For question 6, take a picture and save as a .jpg file. (Lab – Organic Molecules drop box can be found under Assignments → Dropbox)

Labs not submitted in the appropriate area will *not* be graded.

Report Scoring: 20 points total (each part). Questions valued as marked.

Working with a Partner: You are permitted to work with a partner. If you do so, the experimental data reported may be the same, but you need to write your own answers to each question (this includes drawings. Everyone is to do their own drawings). At the beginning of each question you should note that you worked with a partner by writing "Lab Partner (fill in name)."

Materials:

- Model kit (found in CHE 106 Lab Kit)
- Protractor (to measure angles): If you do not have a protractor at home, a quick Google image search on "protractor" should yield many pictures of protractors. You can print one off to use, but it is recommended that you make the picture fairly small – no bigger than half a page.

Goals:

1. To help you visualize the 3-D structure of organic molecules.
2. To teach you how to use model kits
3. To learn how to differentiate among the three types of isomers (structural, geometric, and stereoisomers)

Studies on Life at the Energetic Edge - from Laboratory Experiments to Field-Based Investigations, Volume II Mark Alexander Lever,Bo Barker Jorgensen,Jan Amend,Victoria Orphan,Tori Hoehler,2024-01-16

In collaboration with Microenergy 2022 The 4th International Workshop on Microbial Life under Extreme Energy Limitation we are proud to launch Volume II of Studies on Life at the Energetic Edge from Laboratory Experiments to Field Based Investigations This workshop focuses on the energy controls on microbial life and the exploration of the biological demand for energy Genetic adaptations and phenotypic traits that enable microorganisms to tolerate long periods of energy limitation have attracted broad scientific interest in recent years Laboratory based cultivation experiments have shown that the potential to survive weeks to months in the absence of energy inputs occurs across a phylogenetically wide range of microbes Studies on natural environments have shown that energy limitation is pervasive across most habitats on Earth from highly metabolically active surface habitats to subsurface environments that have been cut off from new energy inputs for thousands of years Yet much remains to be learned about the evolutionary adaptations and life history traits that enable microorganisms to live under low energy conditions Similarly the spectrum of energy sources and metabolisms that enable and support life on Earth and potentially elsewhere in the Universe is far from constrained
