Curious Bones Mary Anning And The Birth Of Paleontology Great Scientists:

Curious Bones Thomas W. Goodhue, 2002 Recounts the life and work of Mary Anning who collected fossils throughout her life and made major discoveries in paleontology when that branch of science was first emerging *Geologists* William B. Rice, 2008-07 People have been interested in Earth for nearly as long as they've lived on it Early scientists wanted to find out how old Earth was how land formations were made and what they were made of Others were interested in fossils rocks and minerals These studies helped teach people what Earth looked like millions of years ago and what it might look like in the future For more information on geology and geologists read *Rocks and Minerals* another book in the Mission Science series

Women Scientists Who Changed the World Kelly Domenico, 2011-12-15 Collects short biographies of important female scientists including Rachel Carson Rosalind Franklin and Mae Jemison [A to Z of Women in Science and Math](#) Lisa Yount, 2007 From ancient times to the present day scientifically inclined women in many cultures have had to battle against the traditional belief that men are more cognitively adept than women At times throughout history women were persecuted for their attempts to break down traditional gender barriers Today women scientists and mathematicians must continue to defend the quality of their work and demand the respect they deserve in the mathematical and scientific communities [A to Z of Women in Science and Math](#) Revised Edition profiles 195 women who fought against these stereotypes throughout history and all over the world to forge new discoveries and theories that would eventually change the way we view science This thoroughly revised book updates the story of each individual to the present day and features 38 new profiles Among the profiles included are those of chemists astronomers geologists environmental scientists and a range of other professions and careers In addition new photographs have been added and the bibliography has been updated Subject indexes allow the reader to search by such professions as microbiology and paleontology Additional subject indexes organize individuals by country of birth country of major scientific activity and year of birth

Dinosaurs and Other Extinct Saurians Richard Moody, 2010 The discovery of dinosaurs and other large extinct saurians a term under which the Victorians commonly lumped ichthyosaurs plesiosaurs pterosaurs and their kin makes exciting reading and has caught the attention of palaeontologists historians of science and the general public alike The papers in this collection go beyond the familiar tales about famous fossil hunters and focus on relatively little known episodes in the discovery and interpretation from both a scientific and an artistic point of view of dinosaurs and other inhabitants of the Mesozoic world They cover a long time span from the beginnings of modern scientific palaeontology in the 1700s to the present and deal with many parts of the world from the Yorkshire coast to Central India from Bavaria to the Sahara The characters in these stories include professional palaeontologists and geologists some of them well known others quite obscure explorers amateur fossil collectors and artists linked together by their interest in Mesozoic creatures

Rebels, Scholars, Explorers Annalisa Berta, Susan Turner, 2020-10-27 Unearthing the amazing hidden stories of women who changed paleontology forever For centuries women

have played key roles in defining and developing the field of vertebrate paleontology Yet very little is known about these important paleontologists and the true impacts of their contributions have remained obscure In *Rebels Scholars Explorers* Annalisa Berta and Susan Turner celebrate the history of women bone hunters delving into their fascinating lives and work At the same time they explore how the discipline has shaped our understanding of the history of life on Earth Berta and Turner begin by presenting readers with a review of the emergence of vertebrate paleontology as a science emphasizing the contributions of women to research topics and employment This is followed by brief biographical sketches and explanations of early discoveries by women around the world over the past 200 years including those who held roles as researchers educators curators artists and preparators Forging new territory Berta and Turner highlight the barriers and challenges faced by women paleontologists describing how some managed to overcome those obstacles in order to build careers in the field Finally drawing on interviews with a diverse group of contemporary paleontologists who share their experiences and offer recommendations to aspiring fossil hunters they provide perspectives on what work still needs to be done in order to ensure that women's contributions to the field are encouraged and celebrated Uncovering and relating lost stories about the pivotal contributions of women in vertebrate paleontology doesn't just make for enthralling storytelling but also helps ensure a richer and more diverse future for this vibrant field Illuminating the discoveries collections and studies of fossil vertebrates conducted by women in vertebrate paleontology *Rebels Scholars Explorers* will be on every paleontologist's most wanted list and should find a broader audience in the burgeoning sector of readers from all backgrounds eager to learn about women in the sciences

Contradiction Studies - Exploring the Field Gisela Febel, Kerstin Knopf, Martin Nonhoff, 2023-04-05

Contradiction is a core concept in the humanities and the social sciences Beside the classical ideas of logical or dialectical contradiction instances of lived contradiction and strategies of coping with it are objects of this study *Contradiction Studies* discuss the many ways in which explicit or implicit contradictions are negotiated in different political or cultural settings This volume collects articles that tackle the concept of contradiction practices of contradicting and lived contradictions from a number of relevant perspectives and assembles contributions from linguistics literary studies philosophy political science and media studies

The Fossil Hunter Shelley Emling, 2025-10-16 At a time when women were excluded from science a young girl made a discovery that marked the birth of paleontology and continues to feed the debate about evolution to this day Mary Anning was only twelve years old when in 1811 she discovered the first dinosaur skeleton of an ichthyosaur while fossil hunting on the cliffs of Lyme Regis England Until Mary's incredible discovery it was widely believed that animals did not become extinct The child of a poor family Mary became a fossil hunter inspiring the tongue twister *She Sells Sea Shells by the Seashore* She attracted the attention of fossil collectors and eventually the scientific world Once news of the fossils reached the halls of academia it became impossible to ignore the truth Mary's peculiar finds helped lay the groundwork for Charles Darwin's theory of evolution laid out in his *On the Origin of Species* Darwin drew on Mary's fossilized creatures as

irrefutable evidence that life in the past was nothing like life in the present A story worthy of Dickens The Fossil Hunter chronicles the life of this young girl with dirt under her fingernails and not a shilling to buy dinner who became a world renowned paleontologist Dickens himself said of Mary The carpenter s daughter has won a name for herself and deserved to win it Here at last Shelley Emling returns Mary Anning of whom Stephen J Gould remarked is probably the most important unsung or inadequately sung collecting force in the history of paleontology to her deserved place in history *The Horn Book Guide to Children's and Young Adult Books* ,2003 **Discoveries and Inventions in Literature for Youth** Joy L. Lowe,Kathryn I. Matthew,2004-03-03 A compilation of books and other resources that are appropriate for students in kindergarten through twelfth grade
