Building a Columnar Database on RAMCloud Christian Tinnefeld, 2015-07-07 This book examines the field of parallel database management systems and illustrates the great variety of solutions based on a shared storage or a shared nothing architecture Constantly dropping memory prices and the desire to operate with low latency responses on large sets of data paved the way for main memory based parallel database management systems However this area is currently dominated by the shared nothing approach in order to preserve the in memory performance advantage by processing data locally on each server The main argument this book makes is that such an unilateral development will cease due to the combination of the following three trends a Today's network technology features remote direct memory access RDMA and narrows the performance gap between accessing main memory on a server and of a remote server to and even below a single order of magnitude b Modern storage systems scale gracefully are elastic and provide high availability c A modern storage system such as Stanford's RAM Cloud even keeps all

data resident in the main memory Exploiting these characteristics in the context of a main memory based parallel database management system is desirable The book demonstrates that the advent of RDMA enabled network technology makes the creation of a parallel main memory DBMS based on a shared storage approach feasible **Data Management on New Hardware** Spyros Blanas,Rajesh Bordawekar,Tirthankar Lahiri,Justin Levandoski,Andrew Pavlo,2017-03-21 This book contains selected papers from the 7th International Workshop on Accelerating Analytics and Data Management Systems Using Modern Processor and Storage Architectures ADMS 2016 and the 4th International Workshop on In Memory Data Management and Analytics IMDM 2016 held in New Dehli India in September 2016 The joint Workshops were co located with VLDB 2016 The 9 papers presented were carefully reviewed and selected from 18 submissions They investigate opportunities in accelerating analytics data management systems and workloads including traditional OLTP data warehousing OLAP ETL streaming real time business analytics and XML RDF processing running memory only environments using processors e g commodity and specialized multi core GPUs and FPGAs storage systems e g storage class memories like SSDs and phase change memory and hybrid programming models like CUDA OpenCL and Open ACC The papers also explore the interplay between overall system design core algorithms query optimization strategies programming approaches performance modeling and evaluation from the perspective of data management applications The Essentials of Computer Organization and Architecture Linda Null,Julia Lobur,2014-02-17 Updated and revised The Essentials of Computer Organization and Architecture Third Edition is a comprehensive resource that addresses all of the necessary organization and architecture topics yet is appropriate for the one term course *Heterogeneous Computing with OpenCL* Benedict Gaster, Lee Howes, David R.
