Climate Change Adaptation And International Development Climate Change Adaptation And International Development:

Climate Change Adaptation and International Development Ryo Fujikura, Masato Kawanishi, 2012-07-26 Climate change impacts upon the world's poorest most heavily. It is therefore essential that international development initiatives focus on improving the ability of developing countries to adapt to the effects of climate change. This book, a product of research by the JICA RI Research Institute of the Japan International Cooperation Agency, examines climate change adaptation from the perspective of development cooperation in order to provide useful lessons for those engaged in research, policy and practice in this vital area. In this book, the editors have brought together a wide range of case studies from across Africa and Asia, covering urban and rural areas and different sectors including water, agriculture and disaster management in order to examine the following: o high resolution climate change projection in Asia and how this can be used in planning appropriate adaptation responses o in depth case studies of climate change projections, social, economic and environmental impact and vulnerability assessment and adaptation in rural Thailand and urban Philippines o cases across Africa for which climate data is less readily available and alternative approaches need to be adopted o the current situation amongst international donors o emerging issues caused by climate change. In the introductory section, the editors draw together the full implications from the case studies to discuss how international communities can support adaptation in developing countries and to give an assessment of bilateral projects. They reflect on the lessons learned and offer recommendations for future research and international development cooperation.

Climate Change Mitigation and International Development Cooperation Ryō Fujikura, Tomoyo Toyota, 2012 This is a companion book to Earthscan's 2010 book *Climate Change Adaptation and International Development*. This book consists of summarised case studies looking at climate change mitigation specifically in Asia, the region producing the most greenhouse gas emissions. It examines international development from the perspective of climate change mitigation and looks at how international communities and donors support developing nations by funding technical assistance and capacity building.

Monitoring and Evaluation of Climate Change Adaptation: A Review of the Landscape Dennis Bours, Colleen McGinn, Patrick Pringle, 2015-09-17 Monitoring and evaluation (M E) of climate change adaptation (CCA) poses an assortment of thorny methodological challenges. Individually, none are unique to CCA, but together they represent a very distinctive conundrum facing practitioners and policy makers. Adding to this complexity, further climate change may be global in nature, but its impacts and how we respond to them through adaptation efforts cut across scales, sectors and levels of intervention. As investments in climate adaptation increase, organizations are seeking to measure, assess and understand an array of adaptation initiatives and derive learnings to inform policy and praxis. This issue presents findings from many of the most important contemporary CCA program evaluation research initiatives. The chapters represent the most coherent and current collection of CCA M E research in this emerging and important field, written by many of its leading

experts Filled with examples and insights in formulating coherent responses to methodological challenges it will be of interest to M E scholars and practitioners globally This is the 147th issue in the New Directions for Evaluation series from Jossey Bass It is an official publication of the American Evaluation Association

Climate Change Adaptation and Development John Carstensen,2018-04-19 Climate change is real and it is man made We have put so many greenhouse gas pollutants into the atmosphere that we will see significant and long term change that we need to adapt and adjust to It is important for development practitioners to understand these impacts and the challenge of how and when to adapt to climate change There are plenty of grim presentations of what the extremes of the possible climate scenarios will throw at us over the next 100 years but not all change will be disastrous some change will be beneficial but much of the change will happen at an unprecedented rate that will require the best possible analysis and understanding of how and when we should adapt to climate change This is important for development practitioners as we invest in ensuring that poverty is reduced and eliminated and the well being of everyone is improved Many countries and communities around the world are vulnerable to the impacts of climate change but developing economies may on one hand be less resilient to the impact but could on the other hand be in a better position to make their development climate smart by making the most efficient use of their economic resources The chapters in this book shine a light on the complexity and the multi dimensional aspects of climate change adaptation They gather some of the experiences of addressing climate change impacts in a development context This book was previously published as a special issue of Development in Practice

Climate Change Adaptation and Development Tor Håkon Inderberg,Siri Eriksen,Karen O'Brien,Linda Sygna,2014-11-20 Climate change poses multiple challenges to development It affects lives and livelihoods infrastructure and institutions as well as beliefs cultures and identities There is a growing recognition that the social dimensions of vulnerability and adaptation now need to move to the forefront of development policies and practices This book presents case studies showing that climate change is as much a problem of development as for development with many of the risks closely linked to past present and future development pathways Development policies and practices can play a key role in addressing climate change but it is critical to question to what extent such actions and interventions reproduce rather than address the social and political structures and development pathways driving vulnerability The chapters emphasise that adaptation is about much more than a set of projects or interventions to reduce specific impacts of climate change it is about living with change while also transforming the processes that contribute to vulnerability in the first place This book will help students in the field of climate change and development to make sense of adaptation as a social process and it will provide practitioners policymakers and researchers working at the interface between climate change and development with useful insights for approaching adaptation as part of a larger transformation to sustainability

Agricultural Adaptation to Climate Change in Africa Cyndi Spindell Berck,Peter Berck,Salvatore Di Falco,2018-03-05 A changing climate is likely to have a drastic impact on crop yields in Africa

The purpose of this book is to document the effects of climate change on agriculture in Africa and to discuss strategies for adaptation to hotter weather and less predictable rainfall. These strategies include promoting opportunities for farmers to adopt technologies that produce optimal results in terms of crop yield and income under local agro-ecological and socioeconomic conditions. The focus is on sub-Saharan Africa, an area that is already affected by changing patterns of heat and rainfall. Because of the high prevalence of subsistence farming, food insecurity, and extreme poverty in this region, there is a great need for practical adaptation strategies. The book includes empirical research in Ethiopia, Kenya, South Africa, Tanzania, and other Sub-Saharan countries, and the conclusion summarizes policy-relevant findings from the chapters. It is aimed at advanced students, researchers, extension and development practitioners, and officials of government agencies, NGOs, and funding agencies. It also will provide supplementary reading for courses in environment and development and in agricultural economics.

Routledge Handbook of Marine Governance and Global Environmental Change Paul G. Harris, 2022-06-15. This comprehensive handbook provides a detailed and unique overview of current thinking about marine governance in the context of global environmental change. Many of the most profound impacts of global environmental change and climate change in particular will occur in the oceans. It is vital that we consider the role of marine governance in adapting to and mitigating these impacts. This comprehensive handbook provides a thorough review of current thinking about marine environmental governance, including law and policy in the context of global environmental change. Initial chapters describe international law regimes and leadership in marine environmental governance in the process, considering how existing regimes for climate change and the oceans should and can be coordinated. This is followed by an exploration of the role of non-state actors, including scientists, nongovernmental organizations, and corporations. The next section includes a collection of chapters highlighting governance schemes in a variety of marine environments and regions, including coastlines, islands, coral reefs, the open ocean, and regional seas. Subsequent chapters examine emerging issues in marine governance, including plastic pollution, maritime transport, sustainable development, environmental justice, and human rights. Providing a definitive overview, the *Routledge Handbook of Marine Governance and Global Environmental Change* is suitable for advanced students in marine and environmental governance, environmental law and policy, and climate change, as well as practitioners, activists, stakeholders, and others concerned about the world's oceans and seas.

Disentangling Migration and Climate Change Thomas Faist, Jeanette Schade, 2013-05-14. This book addresses environmental and climate change-induced migration from the vantage point of migration studies, offering a broad spectrum of approaches for considering the environment-climate migration nexus. Research on the subject is still frequently narrowed down to climate change vulnerability and the environmental push factor. The book establishes the interconnections between societal and environmental vulnerability and migration and capability, allowing appreciation of migration in the frame of climate as a case of spatial and social mobility that is as a strategy of persons and groups to deal with a grossly unequal distribution of life.

chances across the world In their introduction the editors fan out the current debate and state the need to transcend predominantly policy oriented approaches to migration The first section of the volume focuses on Methodologies and Methods and presents very distinct approaches to think climate induced migration Subsequent chapters explore the sensitivity of existing migration flows to climate change in Ghana and Bangladesh the complex relationship between migration demographic change and coping capacities in Canada methodological challenges of a household survey on the significance of migration and remittances for adaptation in the Hindu Kush region and an econometric study of the aftermath of the 1998 floods in Bangladesh The second part Areas of Concern Politics and Human Rights deepens the analysis of discourses as well as of the implications of proposed and implemented policies Contributors discuss such topics as environmental migration as a multi causal problem climate migration as a consequence in an alarmist discourse and climate migration as a solution A study of an integrated relocation program in Papua New Guinea is followed by chapters on the promise and the flaws of planned relocation policy global policy on protection of environmental migrants including both internally displaced peoples and those who cross international borders A concluding chapter places human agency at centre stage and explores the interplay between human rights capability and migration
