explores scientific contributions to technology advancement The Electronic Republic? Phillip J. VanFossen, Michael J. Berson, 2008 In 1991 Lawrence Grossman wrote that a new political system is taking shape in the United States As we approach the twenty first century America is turning into an electronic republic a democratic system that is vastly increasing the people s day to day influence on decisions of state Grossman s forecast implied a sea change in the way citizens would interact with and participate in their representative government a revamping of the way Americans would do citizenship Harnessing the power of technology to promote the ideal of democracy that first pulsed through our nation over 230 years ago may be a feasible achievement in a technocratic age but whether technology can help achieve a revolution as seismic as the political one that our founding fathers initiated may be a practical impossibility Fusing the power of technology and democratic ideals opens opportunities for greater access to information and offers a medium for people to be heard and express their voice with dissemination to the masses through digital tools such as blogs podcasts and wikis Indeed the emergence of the Internet as a nearly ubiquitous element of American society has brought about new opportunities to enhance citizen engagement in democratic politics and to increase the level of civic engagement among American citizens Despite such rhetoric however research has indicated that Grossman s electronic republic has for the most part failed to come to fruition *Geospatial Research: Concepts, Methodologies, Tools, and Applications* Management Association, Information Resources, 2016-04-11 Having the ability to measure and explore the geographic space that surrounds us provides endless opportunities for us to utilize and interact with the world As a broad field of study geospatial research has applications in a variety of fields including military science environmental science civil engineering and space exploration *Geospatial Research Concepts Methodologies Tools and Applications* is a multi volume publication highlighting critical topics related to geospatial analysis geographic information systems and geospatial technologies Exploring multidisciplinary applications of geographic information systems and technologies in addition to the latest trends and developments in the field this publication is ideal for academic and government library inclusion as well as for reference by data scientists engineers government agencies researchers and graduate level students in GIS programs *A Research Guide to Cartographic Resources* Eva H. Dodsworth, 2018-09-22 The interdisciplinary uses of traditional cartographic resources and modern GIS tools allow for the analysis and discovery of information across a wide spectrum of fields *A Research Guide to Cartographic Resources* navigates the numerous American and Canadian cartographic resources available in print and online offering researchers academics and students with information on how to locate and access the large variety of resources new and old Dozens of different cartographic materials are highlighted and summarized along with lists of map libraries and geospatial centers and related professional associations *A Research Guide to Cartographic Resources* consists of 18 chapters two appendices and a detailed index that includes place names and libraries structured in a manner consistent with most reference guides including cartographic categories such as atlases dictionaries gazetteers handbooks maps plans GIS data

and other related material Almost all of the resources listed in this guide are categorized by geography down to the county level making efficient work of the type of material required to meet the information needs of those interested in researching place specific cartographic related resources Additionally this guide will help those interested in not only developing a comprehensive collection in these subject areas but get an understanding of what materials are being collected and housed in specific map libraries geospatial centers and their related websites Of particular value are the sections that offer directories of cartographic and GIS libraries as well as comprehensive lists of geospatial datasets down to the county level This volume combines the traditional and historical collections of cartography with the modern applications of GIS based maps and geospatial datasets
