each dog and calls for a knowledge of genetic principles The ART of breeding has to do with the dogs that you select to mate and requires an understanding of anatomy and an eye for a dog which is the ability to evaluate a dog as one piece in terms of quality balance and correctness Many dog breeders ignore genetic principles Reasons range from genetics is over my head to randomness and chance in breeding make genetics pointless to the most popular chant genetics is boring and I m OK without it The reality is breeding revolves around randomness and chance and if we understand and use genetic principles we have a set of breeding rules to follow Not following these rules increases the chance of producing inferior dogs who are more prone to health problems we also waste time and resources Observing the rules of genetics provides a short cut to breeding better healthier dogs Longterm breeding success requires an understanding of why something happens in a breeding program This is the stuff of genetics and is key to keeping the good things and eliminating undesirable traits in the dogs we breed Just as our ability to read and write requires learning our ABCs learning to breed purebred dogs begins with a layman s

understanding of how a sire and dam pass traits on to offspring The ABCs of Dog Breeding is written for serious breeders who wish to learn practical easy to use breeding principles that will help them make better breeding decisions **Miller's Anatomy of the Dog - E-Book** Howard E.
