Case Based Reasoning On Images And Signals Studies In Computational Intelligence:

Case-Based Reasoning on Images and Signals Petra Perner, 2008 This book is the first edited book that deals with the special topic of signals and images within case based reasoning CBR Signal interpreting systems are becoming increasingly popular in medical industrial ecological biotechnological and many other applications Existing statistical and knowledge based techniques lack robustness accuracy and ability New strategies are needed that can adapt to changing environmental conditions signal variation user needs and process requirements Introducing CBR strategies into signal interpreting systems can satisfy these requirements CBR can be used to control the signal processing process in all phases of a signal interpreting system to derive information of the highest possible quality Beyond this CBR offers different learning capabilities for all phases of a signal interpreting system that satisfy different needs during the development process of a signal interpreting system In the outline of this book we summarize under the term signal signals of 1 dimensional 2 dimensional or 3 dimensional nature The unique data and the necessary computation techniques require extraordinary case representations similarity measures and CBR strategies to be utilised Signal interpretation 1D 2D or 3D signal interpretation is the process of mapping the numerical representation of a signal into logical representations suitable for signal descriptions A signal interpreting system must be able to extract symbolic features from the raw data e.g. the image e.g. irregular structure inside the nodule area of calcification and sharp margin This is a complex process the signal passes through several general processing steps before the final symbolic description is obtained The structure of the book is divided into a theoretical part and into an application oriented part

Sector Research Past Present and Future *Case-based Reasoning* Beatriz López, 2013 Case based reasoning is a methodology with a long tradition in artificial intelligence that brings together reasoning and machine learning techniques to solve problems based on past experiences or cases Given a problem to be solved reasoning involves the use of methods to retrieve similar past cases in order to reuse their solution for the problem at hand Once the problem has been solved learning methods can be applied to improve the knowledge based on past experiences In spite of being a broad methodology applied in industry and services case based reasoning has often been forgotten in both artificial intelligence and machine learning books The aim of this book is to present a concise introduction to case based reasoning providing the essential building blocks for the designing of case based reasoning systems as well as to bring together the main research lines in this field to encourage students to solve current CBR challenges

Advances in Mass Data Analysis of Images and Signals in Medicine, Biotechnology, Chemistry and Food Industry Petra Perner, Ovidio Salvetti, 2008-07-04 The automatic analysis of signals and images together with the characterization and elaboration of their representation features is still a challenging activity in many relevant scientific and hi tech fields such as medicine biotechnology and chemistry Multidimensional and multisource signal processing can generate a number of information patterns which can be useful to increase the knowledge of several domains for solving complex problems Furthermore advanced signal and image manipulation allows relating specific application problems into pattern recognition problems often implying also the development of KDD and other computational intelligence procedures Nevertheless the amount of data produced by sensors and equipments used in biomedicine biotechnology and chemistry is usually quite huge and

structured thus strongly pushing the need of investigating advanced models and efficient computational algorithms for automating mass analysis procedures Accordingly signal and image understanding approaches able to generate automatically expected outputs become more and more essential including novel conceptual approaches and system architectures The purpose of this third edition of the International Conference on Mass Data Analysis of Signals and Images in Medicine Biotechnology Chemistry and Food Industry MDA 2008 www.mda-signals.de was to present the broad and growing scientific evidence linking mass data analysis with challenging problems in medicine biotechnology and chemistry Scientific and engineering experts convened at the workshop to present the current understanding of image and signal processing and interpretation methods useful for facing various medical and biological problems and exploring the applicability and effectiveness of advanced techniques as solutions
