Special Relativity: Speed and Time

Section 12.1. The time Δt measured for two events occurring at a speed v relative to each other is longer than the Δt_0 measured for the same events as observed in a frame at rest relative to the events. The time Δt is called the time interval Δt and is related to the time interval Δt_0 by the equation $\Delta t = \gamma \Delta t_0$, where $\gamma = 1/\sqrt{1 - v^2/c^2}$ is the Lorentz factor. The time Δt_0 is called the proper time interval Δt_0 and is the time interval measured in the frame at rest relative to the events. The time Δt is called the dilated time interval Δt and is the time interval measured in the frame moving relative to the events. The time Δt_0 is called the proper time interval Δt_0 and is the time interval measured in the frame at rest relative to the events. The time Δt is called the dilated time interval Δt and is the time interval measured in the frame moving relative to the events.
