INTRODUCTION TO DIGITAL LOGIC DESIGN LAB EQUIPMENT

Objective:

To Study the operation of different parts of Digital Analog Training System (ETS-7000)

Tools:

- 1- **Digital Analog Trainer (ETS-7000):**
The digital analog trainer is designed for beginners to enhance their concepts about digital and analog theory. It has a solderless breadboard with other parts like switches, LEDs, Seven Segment Display and other slots for wires.
- 2- **Breadboard:**
It is used for the prototyping and hardware simulation of a circuit. It is used to test and check a circuit before soldering the circuit components on a PCB or a Vero board. It makes the testing and analysis of a circuit, a reversible and easy to troubleshoot process unlike the analysis of a circuit on a Vero board.
- 3- **Jumper Wire:**
This wire is used with a breadboard to transmit electric signals. It is used as a conductor with high conductivity and low resistivity.
- 4- **Logic Indicator:**
This indicator is mounted on the trainer and is used to monitor the logic state of the circuit.
- 5- **Logic Switch:**
It is a diode arrangement present on the ETS-7000 trainer and is capable of directing an input signal.
- 6- **DC Power Supply:**
It is an electronic device used in order to supply DC energy to an electrical load.

undergraduates have come to accept the use of computers as commonplace The daily use of portable sophisticated electronic calculators some of them rivaling general purpose minicomputers in their capabilities has hastened this development Over the past several years computer assisted experimentation has assumed an important role in the experimental laboratory Mini and microcomputer systems have become an important part of the physical scientist's array of analytical instruments Prompted by our belief that this was an inevitable development we began several years ago to develop the curricular materials presented in this manual At the outset several objectives seemed important to us First insofar as possible the experiments included should be thoroughly tested and error free Second they should be compatible with a variety of laboratory computer data acquisition and control systems Third little or no previous background in either electronics or programming should be necessary Of course such background would be advantageous To satisfy these objectives we decided to adopt a widespread high level computer language BASIC suitably modified for the purpose Furthermore we have purposely avoided specifying any particular system or equipment Rather the functional characteristics of both hardware and software required are stipulated The experiments have been developed using Varian 620 and Hewlett Packard 2100 series computers but we believe they are readily transferable to other commonly available computer systems with a minimum of difficulty
