By Martin T Hagan Neural Network Design 2nd Second Edition Paperback:

Neural Network Design (2nd Edition) Martin Hagan, Howard Demuth, Mark Beale, Orlando De Jesus, 2014-09-01 This book provides a clear and detailed coverage of fundamental neural network architectures and learning rules. In it, the authors emphasize a coherent presentation of the principal neural networks methods for training them and their applications to practical problems. **American Book Publishing Record**, 1996 **Neural Network Design W/cd** Hagan Martin T. Et. Al, 2009 **Neural Networks and Deep Learning** Charu C. Aggarwal, 2023 This book covers both classical and modern models in deep learning. The chapters of this book span three categories: 1. The basics of neural networks. The backpropagation algorithm is discussed in Chapter 2. Many traditional machine learning models can be understood as special cases of neural networks. Chapter 3 explores the connections between traditional machine learning and neural networks. Support vector machines, linear logistic regression, singular value decomposition, matrix factorization, and recommender systems are shown to be special cases of neural networks. 2. Fundamentals of neural networks. A detailed discussion of training and regularization is provided in Chapters 4 and 5. Chapters 6 and 7 present radial basis function (RBF) networks and restricted Boltzmann machines. 3. Advanced topics in neural networks. Chapters 8, 9, and 10 discuss recurrent neural networks, convolutional neural networks, and graph neural networks. Several advanced topics like deep reinforcement learning, attention mechanisms, transformer networks, Kohonen self-organizing maps, and generative adversarial networks are introduced in Chapters 11 and 12. The book is written for graduate students, researchers, and practitioners. Where possible, an application-centric view is highlighted in order to provide an understanding of the practical uses of each class of techniques. The second edition is substantially reorganized and expanded with separate chapters on backpropagation and graph neural networks. Many chapters have been significantly revised over the first edition. Greater focus is placed on modern deep learning ideas such as attention mechanisms, transformers, and pre-trained language models. *Neural Networks: A Comprehensive Foundation 2Nd Ed.* Simon S. Haykin, 1999 **Neural Networks 2nd Edition** Simon S. Haykin, 2008-02-01 **Advanced Deep Learning with TensorFlow 2 and Keras** Rowel Atienza, 2020-02-28 Updated and revised second edition of the bestselling guide to advanced deep learning with TensorFlow 2 and Keras. **Key Features:** Explore the most advanced deep learning techniques that drive modern AI results. New coverage of unsupervised deep learning using mutual information, object detection, and semantic segmentation. Completely updated for TensorFlow 2. **Book Description:** Advanced Deep Learning with TensorFlow 2 and Keras. Second Edition is a completely updated edition of the bestselling guide to the advanced deep learning techniques available today. Revised for TensorFlow 2, this edition introduces you to the practical side of deep learning with new chapters on unsupervised learning using mutual information, object detection, SSD, and semantic segmentation, FCN, and PSPNet, further allowing you to create your own cutting-edge AI projects. Using Keras as an open-source deep learning library, the book features hands-on projects that show you how to create more effective AI with the

most up to date techniques Starting with an overview of multi layer perceptrons MLPs convolutional neural networks CNNs and recurrent neural networks RNNs the book then introduces more cutting edge techniques as you explore deep neural network architectures including ResNet and DenseNet and how to create autoencoders You will then learn about GANs and how they can unlock new levels of AI performance Next you ll discover how a variational autoencoder VAE is implemented and how GANs and VAEs have the generative power to synthesize data that can be extremely convincing to humans You ll also learn to implement DRL such as Deep Q Learning and Policy Gradient Methods which are critical to many modern results in AI What you will learn Use mutual information maximization techniques to perform unsupervised learning Use segmentation to identify the pixel wise class of each object in an image Identify both the bounding box and class of objects in an image using object detection Learn the building blocks for advanced techniques MLPs CNN and RNNs Understand deep neural networks including ResNet and DenseNet Understand and build autoregressive models autoencoders VAEs and GANs Discover and implement deep reinforcement learning methods Who this book is for This is not an introductory book so fluency with Python is required The reader should also be familiar with some machine learning approaches and practical experience with DL will also be helpful Knowledge of Keras or TensorFlow 2.0 is not required but is recommended
