quantity we can use to measure the efficiency of these processors The proposed quantity is the ratio between the minimum possible energy consumption and the actual energy consumption for a given application using a given semiconductor technology In chapter 3 whether or not this quantity can be used in practice is discussed for many real world applications In chapter 4 general purpose processors in the past and present are discussed from this viewpoint In chapter 5 how we can actually design processors with near optimal efficiencies is described and in chapter 6 how we can program such processors This book gives a new way to look at the field of the design of high performance processors
