Enterprise Networks and Logistics for Agile Manufacturing

Lihui Wang, S.C. Lenny Koh, 2010-07-24 Enterprise Networks and Logistics for Agile Manufacturing presents a focused collection of quality chapters on state of the art research efforts in the areas of enterprise networks and logistics as well as their practical applications towards agile manufacturing. With the increasing decentralisation of manufacturing systems and outsourcing of processes, more robust and practical approaches and systems are needed to support agile manufacturing operations. Enterprise Networks and Logistics for Agile Manufacturing consists of two major sections: the first presents a broad based review of the key areas of research in enterprise networks and logistics; the second focuses on an in depth treatment of a particular methodology or system relevant to the book title. Examples include sustainable green supply chain, value creation and supplier selection, extended enterprise network management, reverse logistics and innovative supply chain systems. The authors take into account the need to pose intellectual challenges while retaining a balanced approach in terms of scope versus depth and theory versus applications. Enterprise Networks and Logistics for Agile Manufacturing can be beneficial to academic researchers, practicing engineers and managers and graduate students with an interest in any manufacturing sectors. It can enable them to better understand the present state and future trends of research in this important area in order to position themselves strategically for future challenges as we enter the era of agile and distributed manufacturing.

Improving Forecasts with Integrated Business Planning

Ganesh Sankaran, Federico Sasso, Robert Kepczynski, Alessandro Chiaraviglio, 2019-03-05 This book provides both a broad overview of the forecasting process covering technological and human aspects alike and deep insights into algorithms and platform functionalities in the IBP toolbox required to maximize forecast accuracy. Rich in technical and business explanations, it addresses short, medium and long term forecasting processes using functionalities available in demand planning and demand sensing. There are also several theoretical concepts underpinning the algorithms discussed; these are explained with numerical examples to help demystify the IBP forecasting toolbox. Beyond standard procedures, the book also discusses custom approaches e.g. new segmentation criteria, new outlier detection and correction methods and new methods e.g. the use of Markov chains for forecasting sporadic demands etc. It subsequently benchmarks common practices using these innovative approaches and discusses the results. As measurement is an important precondition for improvement, an entire chapter is devoted to discussing process improvement and value using the Six Sigma methodology. In closing, the book provides several useful tips and tricks that should come in handy during project implementation.
