INTRODUCTION A signal in mathematical term is a function A function is a dependent variable or some independent variables and the number of variables could be one or more These variables could be for instance time distance temperature etc In this text book we are concerned with a function of a single variable which is time but time will also lose its meaning because the function of a signal is the function of numbers and the numbers are also restricted to integers Therefore in Digital Signal Processing DSP the type of signal we shall be concerned with shall be functions of n which could be positive or negative integers e g 14 0 15 etc
