Digital Signal Processing And Statistical Classification:

Digital Signal Processing And Statistical Classification George J. Miao, 2002 *Digital Signal Processing and Statistical Classification* George J. Miao, Mark A. Clements, 2002 This is the first book to introduce and integrate advanced digital signal processing DSP and classification together and the only volume to introduce state of the art transforms including DFT FFT DCT DHT PCT CDT and ODT together for DSP and communication applications You get step by step guidance in discrete time domain signal processing and frequency domain signal analysis digital filter design and adaptive filtering multirate digital processing and statistical signal classification It also helps you overcome problems associated with multirate A/D and D/A converters **Development of Digital Signal Processing and Statistical Classification Methods for**

Distinguishing Nasal Consonants Meng Wang, 2003 Keywords digital signal processing statistics classification nasal consonants **Fundamentals of Signal Processing in Generalized Metric Spaces** Andrey Popoff, 2022-04-19 Exploring the interrelations between generalized metric spaces lattice ordered groups and order statistics the book contains a new algebraic approach to Signal Processing Theory It describes mathematical concepts and results important in the development analysis and optimization of signal processing algorithms intended for various applications The book offers a solution of large scale Signal Processing Theory problems of increasing both signal processing efficiency under prior uncertainty conditions and signal processing rate that is provided by multiplication free signal processing algorithms based on lattice ordered group operations From simple basic relationships to computer simulation the text covers a wide range of new mathematical techniques essential for understanding the proposed signal processing algorithms developed for solving the following problems signal parameter and spectral estimation signal filtering detection classification and resolution array signal processing demultiplexing and demodulation in multi channel communication systems and multi station networks wavelet analysis of 1D 2D signals Along with discussing mathematical aspects each chapter presents examples illustrating operation of signal processing algorithms developed for various applications The book helps readers understand relations between known classic and obtained results as well as recent research trends in Signal Processing Theory and its applications providing all necessary mathematical background concerning lattice ordered groups to prepare readers for independent work in the marked directions including more advanced research and development

Signal Processing Fundamentals and Applications for Communications and Sensing Systems John Minkoff, 2002 This cutting edge book is a clear and thorough exposition of signal processing fundamentals for communications and major sensing systems Based on the author's earlier book in this area this revised and expanded resource offers you expert guidance in the detection of optical acoustic and radio frequency signals in noise It covers digital filtering and parameter estimation and helps you with problems associated with radar system design including search tracking and measurement ambiguity Discrete Communication Systems Stevan Berber, 2021-07-19 This is the first textbook which presents the theory of pure discrete communication

systems and its relation to the existing theory of digital and analog communications at a graduate level Based on the orthogonality principles and theory of discrete time stochastic processes a generic structure of communication systems based on correlation demodulation and optimum detection is developed and presented in the form of mathematical operators with precisely defined inputs and outputs and related functions Based on this generic structure the traditionally defined phase shift keying PSK frequency shift keying FSK quadrature amplitude modulation QAM orthogonal frequency division multiplexing OFDM and code division multiple access CDMA systems are deduced as its special cases The main chapters presenting the theory of communications are supported by a set of supplementary chapters containing the theory of deterministic and stochastic signal processing which makes the book a self contained presentation of the subject The book uses unified notation and unified terminology which allows a clear distinction between deterministic and stochastic signals power signals and energy signals discrete time signals and processes and continuous time signals and processes and an easy way of understanding the differences in defining the correlation functions power and energy spectral densities and amplitudes and power spectra of the mentioned signals and processes In addition to solved examples in the text about 300 solved problems are available to readers in the supplementary material that aim to enhance the understanding of the theory in the text In addition five research Projects are added to be used by lecturers or instructors that aim to enhance the understanding of theory and to establish its relation to the practice

Introduction to Direction-of-arrival Estimation

Zhizhang Chen, Gopal Gokeda, Yiqiang Yu, 2010 Direction of Arrival DOA estimation concerns the estimation of direction finding signals in the form of electromagnetic or acoustic waves impinging on a sensor or antenna array DOA estimation is used for locating and tracking signal sources in both civilian and military applications This authoritative volume provides an overview and performance analysis of the basic DOA algorithms including comparisons between the various types The book offers you a detailed understanding of the arrays pertinent to DOA finding and presents a detailed illustration of the ESPRIT based DOA algorithms complete with their performance assessments From antennas and array receiving systems to advanced topics on DOA estimation this book serves as a one stop resource for professionals and students Nearly 100 illustrations and more than 281 equations support key topics throughout

Signal Digitization and Reconstruction in Digital Radios Yefim Poberezhskiy, Gennady Poberezhskiy, 2018-12-31 This comprehensive resource provides the latest information on digitization and reconstruction D R of analog signals in digital radios Readers learn how to conduct comprehensive analysis concisely describe the major signal processing procedures carried out in the radios and demonstrate the dependence of these procedures on the quality of D R The book presents and analyzes the most promising and theoretically sound ways to improve the characteristics of D R circuits and illustrate the influence of these improvements on the capabilities of digital radios The book is intended to bridge the gap that exists between theorists and practical engineers developing D R techniques by introducing new signal transmission and reception methods that can effectively utilize the

unique capabilities offered by novel digitization and reconstruction techniques **Complex and Hypercomplex Analytic Signals** Stefan L. Hahn, Kajetana M. Snopek, 2016-12 Based on the bestselling Artech House classic title Hilbert Transforms Signal Processing this comprehensive new resource introduces complex and hypercomplex analytic signals and their applications Professionals find in depth explanations of the theory of multidimensional complex and hypercomplex signals illustrated with numerous examples and followed by practical applications The survey of chosen hypercomplex algebras and the orthants of the n dimensional Cartesian space and single orthant operators are explored This book also covers topics including the polar representation of analytic signals quasi analytic signals the space frequency of n D complex and hypercomplex signals as well as the causality of signals **Advanced Color Image Processing and Analysis** Christine Fernandez-Maloigne, 2012-07-11 This volume does much more than survey modern advanced color processing Starting with a historical perspective on ways we have classified color it sets out the latest numerical techniques for analyzing and processing colors the leading edge in our search to accurately record and print what we see The human eye perceives only a fraction of available light wavelengths yet we live in a multicolor world of myriad shining hues Colors rich in metaphorical associations make us purple with rage or green with envy and cause us to see red Defining colors has been the work of centuries culminating in today s complex mathematical coding that nonetheless remains a work in progress only recently have we possessed the computing capacity to process the algebraic matrices that reproduce color more accurately With chapters on dihedral color and image spectrometers this book provides technicians and researchers with the knowledge they need to grasp the intricacies of today s color imaging
