Digital Audio Broadcasting Principles And Applications Of Digital Radio:

Digital Audio Broadcasting Wolfgang Hoeg, Thomas Lauterbach, 2003-10-31 Now the standardisation work of DAB Digital Audio Broadcasting system is finished many broadcast organisations network providers and receiver manufacturers in European countries and outside of Europe for example Canada and the Far East will be installing DAB broadcast services as pilot projects or public services In addition some value added services data and video services are under development or have already started as pilot projects The new digital broadcast system DAB distinguishes itself from existing conventional broadcast systems and the various new international standards and related documents from ITU R ISO IEC ETSI EBU EUREKA147 and others are not readily available and are difficult to read for users Therefore it is essential that a well structured technical handbook should be available The Second Edition of Digital Audio Broadcasting has been fully updated with new sections and chapters added to reflect all the latest developments and advances Digital Audio Broadcasting Provides a fully updated comprehensive overview of DAB Covers international standards applications and other technical issues Combines the expertise of leading researchers in the field of DAB Now covers such new areas as IP Tunneling via DAB Electronic Programme Guide for DAB and Metadata A comprehensive overview of DAB specifically written for planning and system engineers developers for professional and domestic equipment manufacturers service providers as well as postgraduate students and lecturers in communications technology

Digital Audio Broadcasting Wolfgang Hoeg, Thomas Lauterbach, 2009-06-22 Digital Audio Broadcasting revised with the latest standards and updates of all new developments The new digital broadcast system family is very different from existing conventional broadcast systems It is standardised in a large number of documents from ITU R ISO IEC ETSI EBU and others which are often difficult to read This book offers a comprehensive and fully updated overview of Digital Audio Broadcasting DAB DAB and Digital Multimedia Broadcasting DMB and related services and applications Furthermore the authors continue to build upon the topics of the previous editions including audio coding data services receiver techniques frequencies and many others There are several new sections in the book which would be otherwise difficult to locate from various sources Key Features The contents have been significantly updated from the second edition including up to date coverage of the latest standards Contains a new chapter on Digital Multimedia Broadcasting Must have handbook for engineers developers and other professionals in the field This book will be of interest to planning and system engineers developers for professional and domestic equipment manufacturers service providers postgraduate students and lecturers in communications technology Broadcasting engineers in related fields will also find this book insightful

Digital Audio Broadcasting Wolfgang Hoeg, Thomas Lauterbach, 2001-03-28 The new Digital Radio system DAB Digital Audio Broadcasting is a highly innovative and universal multimedia broadcast system that will replace the existing AM and FM audio broadcast services in many parts of the world in the immediate future It is designed for excellent mobile reception is highly robust against multipath reception and allows the

use of single frequency networks SFN for high frequency efficiency In addition to several high quality digital audio services DAB is able to transmit programme associated data and a host of other data services including travel and traffic information and still and moving pictures Dynamic multiplex management on the network side opens up new possibilities for flexible programming Written in an accessible style Digital Audio Broadcasting provides an excellent guide for developers in industry planning engineers together with broadcasters network providers and service and content providers For students and those wishing to get to grips with the new concepts of digital broadcasting it will serve as a comprehensive introduction to the field Explains the basic concepts of DAB including audio processing data transmission and modulation schemes and how the system can be implemented and operated Features new broadcasting components such as perceptual audio coding MPEG 1 and MPEG 2 OFDM channel coding and modulation multiplex management STI and data transmission protocols MOT Focuses on the practical implications for service provision and coverage planning and the new infrastructure required in studios and broadcasting houses for multiplex and network management Provides an insight into current receiver development strategies
