Degenerate Nonlinear Diffusion Equations Lecture Notes In Mathematics:

Degenerate Nonlinear Diffusion Equations Angelo Favini, Gabriela Marinoschi, 2012-05-08 The aim of these notes is to include in a uniform presentation style several topics related to the theory of degenerate nonlinear diffusion equations treated in the mathematical framework of evolution equations with multivalued m accretive operators in Hilbert spaces The problems concern nonlinear parabolic equations involving two cases of degeneracy More precisely one case is due to the vanishing of the time derivative coefficient and the other is provided by the vanishing of the diffusion coefficient on subsets of positive measure of the domain From the mathematical point of view the results presented in these notes can be considered as general results in the theory of degenerate nonlinear diffusion equations However this work does not seek to present an exhaustive study of degenerate diffusion equations but rather to emphasize some rigorous and efficient techniques for approaching various problems involving degenerate nonlinear diffusion equations such as well posedness periodic solutions asymptotic behaviour discretization schemes coefficient identification and to introduce relevant solving methods for each of them

Nonlinear Diffusion Equations Zhuoqun Wu, 2001 Nonlinear diffusion equations an important class of parabolic equations come from a variety of diffusion phenomena which appear widely in nature They are suggested as mathematical models of physical problems in many fields such as filtration phase transition biochemistry and dynamics of biological groups In many cases the equations possess degeneracy or singularity The appearance of degeneracy or singularity makes the study more involved and challenging Many new ideas and methods have been developed to overcome the special difficulties caused by the degeneracy and singularity which enrich the theory of partial differential equations This book provides a comprehensive presentation of the basic problems main results and typical methods for nonlinear diffusion equations with degeneracy Some results for equations with singularity are touched upon Contents

Ni,L.A. Peletier,J. Serrin,1991-06-01 Nonlinear diffusion equations have held a prominent place in the theory of partial differential equations both for the challenging and deep mathematical questions posed by such equations and the important role they play in many areas of science and technology Examples of current interest are biological and chemical pattern formation semiconductor design environmental problems such as solute transport in groundwater flow phase transitions and combustion theory Central to the theory is the equation $U_t + \Delta u = f(u)$ Here Δ denotes the n dimensional Laplacian Δu and f are given functions and the solution is defined on some domain $\Omega \times [0, T]$ in space time Fundamental questions concern the existence uniqueness and regularity of solutions the existence of interfaces or free boundaries the question as to whether or not the solution can be continued for all time the asymptotic behavior both in time and space and the development of singularities for instance when the solution ceases to exist after finite time either through extinction or through blow up Dual Variational Approach to Nonlinear Diffusion Equations Gabriela Marinoschi,2023-03-28 This monograph explores a dual variational formulation of solutions to nonlinear diffusion equations with general nonlinearities as null minimizers of appropriate energy functionals The author demonstrates how this method can be utilized as a convenient tool for proving the existence of these solutions when others may fail such as in cases of evolution equations with nonautonomous operators with low regular data or with singular diffusion coefficients By reducing it to a minimization problem the original problem is transformed into an optimal control problem with a linear state equation This procedure simplifies the proof of the existence of minimizers and in particular the determination of the first order conditions of optimality The dual variational formulation is illustrated in the text with specific diffusion equations that have general nonlinearities provided by potentials having various stronger or weaker properties These equations can represent mathematical models to various real world physical processes Inverse

problems and optimal control problems are also considered as this technique is useful in their treatment as well

The Porous Medium Equation Juan Luis Vazquez, 2007 The Heat Equation is one of the three classical linear partial differential equations of second order that form the basis of any elementary introduction to the area of PDEs and only recently has it come to be fairly well understood In this monograph aimed at research students and academics in mathematics and engineering as well as engineering specialists Professor Vazquez provides a systematic and comprehensive presentation of the mathematical theory of the nonlinear heat equation usually called the Porous Medium Equation PME This equation appears in a number of physical applications such as to describe processes involving fluid flow heat transfer or diffusion Other applications have been proposed in mathematical biology lubrication boundary layer theory and other fields Each chapter contains a detailed introduction and is supplied with a section of notes providing comments historical notes or recommended reading and exercises for the reader

Partial Differential Equations in China Chaohao Gu, Xiayi Ding, Chung-Chun Yang, 2012-12-06 In the past few years there has been a fruitful exchange of expertise on the subject of partial differential equations PDEs between mathematicians from the People's Republic of China and the rest of the world The goal of this collection of papers is to summarize and introduce the historical progress of the development of PDEs in China from the 1950s to the 1980s The results presented here were mainly published before the 1980s but having been printed in the Chinese language have not reached the wider audience they deserve Topics covered include among others nonlinear hyperbolic equations nonlinear elliptic equations nonlinear parabolic equations mixed equations free boundary problems minimal surfaces in Riemannian manifolds microlocal analysis and solitons For mathematicians and physicists interested in the historical development of
