Smartphone-Based Real-Time Digital Signal Processing Nasser Kehtarnavaz, Shane Parris, Abhishek Sehgal, 2022-11-10 Real time or applied digital signal processing courses are offered as follow ups to conventional or theory oriented digital signal processing courses in many engineering programs for the purpose of teaching students the technical know how for putting signal processing algorithms

or theory into practical use These courses normally involve access to a teaching laboratory that is equipped with hardware boards in particular DSP boards together with their supporting software A number of textbooks have been written discussing how to achieve real time implementation on these hardware boards This book discusses how smartphones can be used as hardware boards for real time implementation of signal processing algorithms as an alternative to the hardware boards that are currently being used in signal processing teaching laboratories The fact that mobile devices in particular smartphones have now become powerful processing platforms has led to the development of this book thus enabling students to use their own smartphones to run signal processing algorithms in real time considering that these days nearly all students possess smartphones Changing the hardware platforms that are currently used in applied or real time signal processing courses to smartphones creates a truly mobile laboratory experience or environment for students In addition it relieves the cost burden associated with using a dedicated signal processing board noting that the software development tools for smartphones are free of charge and are well developed This book is written in such a way that it can be used as a textbook for applied or real time digital signal processing courses offered at many universities Ten lab experiments that are commonly encountered in such courses are covered in the book This book is written primarily for those who are already familiar with signal processing concepts and are interested in their real time and practical aspects Similar to existing real time courses knowledge of C programming is assumed This book can also be used as a self study guide for those who wish to become familiar with signal processing app development on either Android or iPhone smartphones All the lab codes can be obtained as a software package from [http sites fastspring com bookcodes product bookcodes](http://sites.fastspring.com/bookcodes/product/bookcodes)

Design of an Intelligent Embedded System for Condition Monitoring of an Industrial Robot Alaa Abdulhady Jaber, 2016-09-08 This thesis introduces a successfully designed and commissioned intelligent health monitoring system specifically for use on any industrial robot which is able to predict the onset of faults in the joints of the geared transmissions However the developed embedded wireless condition monitoring system leads itself very well for applications on any power transmission equipment in which the loads and speeds are not constant and access is restricted As such this provides significant scope for future development Three significant achievements are presented in this thesis First the development of a condition monitoring algorithm based on vibration analysis of an industrial robot for fault detection and diagnosis The combined use of a statistical control chart with time domain signal analysis for detecting a fault via an arm mounted wireless processor system represents the first stage of fault detection Second the design and development of a sophisticated embedded microprocessor base station for online implementation of the intelligent condition monitoring algorithm and third the implementation of a discrete wavelet transform using an artificial neural network with statistical feature extraction for robot fault diagnosis in which the vibration signals are first decomposed into eight levels of wavelet coefficients

Discovery of Ill-Known Motifs in Time Series Data Sahar Deppe, 2021-10-01 This book includes a novel motif discovery for time series KITE ill Known motif discovery in Time

series data to identify ill known motifs transformed by affine mappings such as translation uniform scaling reflection stretch and squeeze mappings Additionally such motifs may be covered with noise or have variable lengths Besides KITE's contribution to motif discovery new avenues for the signal and image processing domains are explored and created The core of KITE is an invariant representation method called Analytic Complex Quad Tree Wavelet Packet transform ACQTWP This wavelet transform applies to motif discovery as well as to several signal and image processing tasks The efficiency of KITE is demonstrated with data sets from various domains and compared with state of the art algorithms where KITE yields the best outcomes

Digital Signal Processing System-level Design Using LabVIEW Nasser Kehtarnavaz, Namjin Kim, 2005 LabVIEW Laboratory Virtual Instrumentation Engineering Workbench is a graphical programming environment developed by National Instruments NI which allows a user friendly graphical approach to system level design This will be a LabVIEW based book providing the teaching materials for DSP Digital Signal Processing lab or project courses industry short courses and self study for practitioners interested in using LabVIEW for system level design with DSPs such as the TMS320C6000 Such lab or project courses are currently being

offered at many universities both at undergraduate and graduate levels as a follow up to DSP theory courses The programming used in DSP lab courses is either Matlab C or assembly language Currently there is not a DSP laboratory book using system level graphical programming Such a programming approach allows students engineers easily to design DSP systems without the need to become involved or get bogged down in low level programming issues Growing numbers of users of LabVIEW in both academia and industry will benefit by having in one place the information they need to perform high level design of DSP systems A graphical programming approach LabVIEW to DSP system level design DSP implementation of appropriate components of a LabVIEW designed system Providing system level hands on experiments for DSP lab or project courses
