

BEFORE OPERATION

NOTE: The engine and pump on your Coleman® Powermate® Pressure Washer will often have improved performance after a break-in period of several hours.

PRE-START PREPARATION

Before starting the pressure washer, check for loose or missing parts and for any damage which may have occurred during shipment.

HOSE AND GUN ASSEMBLY

NOTE: Align threaded connections carefully to prevent damaging threads during assembly. Tighten connections securely to prevent leaks during operation.

Attach the hose to the inlet of the trigger gun.

Handle Installation

Install handle and hose hook as shown in Figure 1.

LUBRICATION

DO NOT attempt to start the pressure washer engine without filling the engine crank case with the proper amount and type of oil (See pages 11 and 12 and Figure 2). Your pressure washer engine has been shipped from the factory without oil in the engine crankcase. Operating the unit without oil will ruin the engine.

The pump has been shipped with oil. Before operating the pressure washer check the oil level of the pump to make sure the oil level is to pump manufacturer's required level. (See Figure 2). Use oil that is recommended from the pump manufacturer. **DO NOT OVERFILL!**

If the pump is not equipped with a dipstick or side glass window check oil leaks from the pump. Pump oil is shipped in the pump from factory. Follow pump manufacturer's maintenance schedule for proper care.

FUEL

Fill the tank with clean, fresh unleaded automotive gasoline. (See Figure 2). Regular grade gasoline may be used provided a high octane rating is obtained (at least 85 pump octane).

WARNING

Gasoline is very dangerous. Serious injury may result from fire caused by gasoline contacting hot surfaces.

Do not overfill the tank. Keep maximum fuel level 1/2 inch below the bottom of the filler neck. This will allow expansion in hot weather and prevent overflow.
