Christianto, Florentin Smarandache, 2018 In this book we try to make our case through examples in different fields of science including missiology ecclesiology 10 and also medicine and economics theorizing We try to be almost everything for everyone while keep being humble as two unprofitable servants That way we would quote the title of Borges short story Everything and nothing Lectures on Quantum Mechanics Steven Weinberg, 2015-09-10 Nobel Laureate Steven Weinberg

demonstrates exceptional insight in this fully updated concise introduction to modern quantum mechanics for graduate students *Annual Reports in Computational Chemistry* David A. Dixon, 2021-11-11 Annual Reports in Computational Chemistry Volume 17 provides timely and critical reviews on important topics in computational chemistry Topics covered in the series include quantum chemistry molecular mechanics force fields chemical education and applications in academic and industrial settings Focusing on the most recent literature and advances in the field each article covers a specific topic of importance to computational chemists Includes timely discussions on quantum chemistry and molecular mechanics Covers force fields chemical education and more Presents the latest in chemical education and applications in both academic and industrial settings **Cellular Automata Representation of Submicroscopic Physics** Victor Christianto, Volodymyr

Krasnholovets, Florentin Smarandache, Krasnholovets theorized that the microworld is constituted as a tessellation of

primary topological balls The tessellattice becomes the origin of a submicroscopic mechanics in which a quantum system is subdivided to two subsystems the particle and its inerton cloud which appears due to the interaction of the moving particle with oncoming cells of the tessellattice The particle and its inerton cloud periodically change the momentum and hence move like a wave The new approach allows us to correlate the Klein Gordon equation with the deformation coat that is formed in the tessellattice around the particle The submicroscopic approach shows that the source of any type of wave movements including the Klein Gordon Schr dinger and classical wave equations is hidden in the tessellattice and its basic exciations inertons carriers of mass and inert properties of matter

On Cellular Automata Representation of Submicroscopic Physics: From Static Space to Zuse's Calculating Space Hypothesis Victor Christianto, Volodymyr

Krasnoholovets, Florentin Smarandache, In some recent papers G t Hooft and others it has been argued that quantum mechanics can arise from classical cellular automata Nonetheless G Shpenkov has proved that the classical wave equation makes it possible to derive a periodic table of elements which is very close to Mendeleyev's one and describe also other phenomena related to the structure of molecules Hence the classical wave equation complements Schr dinger's equation which implies the appearance of a cellular automaton molecular model starting from classical wave equation The other studies show that the microworld is constituted as a tessellation of primary topological balls The tessellattice becomes the origin of a submicroscopic mechanics in which a quantum system is subdivided to two subsystems the particle and its inerton cloud which appears due to the interaction of the moving particle with oncoming cells of the tessellattice The particle and its inerton cloud periodically change the momentum and hence move like a wave The new approach allows us to correlate the Klein Gordon equation with the deformation coat that is formed in the tessellattice around the particle The submicroscopic approach shows that the source of any type of wave movements including the Klein Gordon Schr dinger and classical wave equations is hidden in the tessellattice and its basic exciations inertons carriers of mass and inert properties of matter We also discuss possible correspondence with Konrad Zuse's calculating space
