STUDY HINT Before students begin this lesson, have them copy the subheads into their notebooks. Tell students to leave plenty of space between the subheads so that they can add information. As students read the lesson, have them include career information in their notes. Encourage students to add additional careers as they continue their study of life science.

Linking Prior Knowledge Ask students what they think science is. Discuss all responses. Relate that people use science to try to understand the world in which they live. Explain that scientists observe what is going on in the world and try to figure out why and how things happen.

2 Teach

Discussion Write the term *specialist* on the board. Guide students to recognize that a specialist is a person who studies, or works in, only one part of a particular field. Ask students to name specialists with whom they are familiar. If they have difficulty, point out a few of the medical specialists with whom they may have dealt, such as pediatricians or dermatologists. Then, ask students to name life science specialists who work in areas other than medicine. Ask how the work of these specialists affects students' lives.

Answers to questions

- ▶ **LIST:** Accept any two of the following: botany, physiology, zoology, ecology, microbiology, or anatomy.
- ▶ **DESCRIBE:** studying or working in only one part of a particular subject
- ▶ **EXPLAIN:** The study of life science provides information about medicine and the making of foods.

1-1 What is life science?

Objective

Identify and describe what is studied in some of the branches of life science.

Key Term

specialization (speh-ee-ah-l-ee-zay-shuhn) studying or working in only one part of a subject

Studying Life Science Science is an organized collection of knowledge about the world. It is a way of finding out why things happen as they do. Scientists try to solve problems by testing possible answers to see if they work. Science knowledge is based on testing and observations.

The scientific study of the areas of science that deal with living things is called life science. Life science is divided into many different branches. One branch is anatomy, or the study of the parts of the body. Another branch is physiology, or the study of how the whole body functions. Some of the other branches of life science are described in Figure 1-2.

▶ **USE:** What are two branches of life science?

Specialization As more and more is learned about the world, people can choose specific

subjects to study. This is called *specialization*. A person who studies or works in one part of a subject is called a *specialist*. There are many science specialists. For example, some scientists study only one group of animals. Some scientists study diseases that affect only animals. In science, some scientists study diseases in plants.

▶ **DESCRIBE:** What is specialization?

Importance of Life Science The study of living things affects your life in many ways. Medicine you might use for acne was developed through scientific study. The causes and warning signs of cancer were learned from science research. Doctors can perform operations because they know about the parts of the human body and how they work.

Some of the foods you eat were gotten by information about plants. The making of a food also uses knowledge of life science. All cheeses could not be made without molds. You could not be made without bacteria. People have learned about bacteria and molds to use them to make these foods.

▶ **EXPLAIN:** How is life science part of your life?

Using Visuals Show students pictures of living things, such as plants, animals, and bacteria. Have students classify the pictures by the branches of life science that study them.

COOPERATIVE LEARNING
