Joseph LeDoux's *The Emotional Brain* presented a revelatory examination of the biological bases of our emotions and memories. Now the world renowned expert on the brain has produced with a groundbreaking work that tells a more profound story how the little spaces between the neurons, the brain's synapses, are the channels through which we think, act, imagine, feel, and remember. Synapses encode the essence of personality, enabling each of us to function as a distinctive, integrated individual from moment to moment. Exploring the functioning of memory, the synaptic basis of mental illness and drug addiction, and the mechanism of self awareness, *Synaptic Self* is a provocative and mind expanding work that is destined to become a classic.

The Voices of War Michael Caulfield, 2010-11-01. Drawn from engagements ranging from World War I through to operations in East Timor and Iraq, these stories are taken from the Australians at War Film Archive, a collection of the memories of more than 2000 Australians who have served both on the front line and at home. Some are unbelievably unbearably tragic, even after sixty or seventy years; others are the golden memories of happy, albeit unusual, times. And more often than not, they are stories that have never been shared with others, even family members. There are stories from winners of the Victoria Cross, from the POW camps of Asia and Europe, from the patrols of Vietnam, through to those who served as peacekeepers in Rwanda and Somalia. There are stories from nurses, from those who have volunteered to serve with aid agencies, and stories of ordinary Australians caught up by circumstances and by duty in wartime. These are their words.

Quantitative History of China Zhiwu Chen, Cameron Campbell, Debin Ma, 2025-09-25. This Open Access book marks the beginning of a new era in the study of Chinese history. Since the beginning of the computer age, quantitative techniques have been increasingly used to study specific topics like family, population, and living standards in China's past. However, sample sizes have usually been small due to either historical archives availability constraints or limited human processing capacity. With much increased computing power and machine assisted reading processing capacity, many big historical databases have become available, offering quantitative historians and social scientists great opportunities to study China's past development experience. This volume showcases a collection of new findings concerning China's political, social, and economic history, and typically based on newly constructed large historical datasets. Most of the work has involved an interdisciplinary team of economists, sociologists, political scientists, historians, and econometricians, demonstrating how new big data and quantitative methods may be brought to bear on some of the biggest questions related to China's development over the past three millennia, and on the implications of distant past events on contemporary China. Topics covered range from the roles of war, state formation, religion, culture, finance, and institutions in long run development, and technological innovations, to regicide, history, to the organization and capacity of the bureaucracy. Contributors include leading figures in the quantitative study of China's long run socioeconomic and political history. This volume will be of value to anyone with an interest in Chinese economic, political, social, and/or institutional history, as well as anyone interested in quantitative history more generally.
