Computer Games And Instruction:

Computer Games and Instruction J. D. Fletcher, Sigmund Tobias, 2011-05-01 There is intense interest in computer games. A total of 65 percent of all American households play computer games and sales of such games increased 22.9 percent last year. The average amount of game playing time was found to be 13.2 hours per week. The popularity and market success of games is evident from both the increased earnings from games over 7 Billion in 2005 and from the fact that over 200 academic institutions worldwide now offer game related programs of study. In view of the intense interest in computer games, educators and trainers in business industry, the government and the military would like to use computer games to improve the delivery of instruction. Computer Games and Instruction is intended for these educators and trainers. It reviews the research evidence supporting use of computer games for instruction and also reviews the history of games in general in education and by the military. In addition, chapters examine gender differences in game use and the implications of games for use by lower socio-economic students, for students reading and for contemporary theories of instruction. Finally, well known scholars of games will respond to the evidence reviewed.

The Cambridge Handbook of Multimedia Learning Richard E. Mayer, 2014-07-28 In recent years, multimedia learning or learning from words and images has developed into a coherent discipline with a significant research base. The Cambridge Handbook of Multimedia Learning is unique in offering a comprehensive up to date analysis of research and theory in the field with a focus on computer based learning. Since the first edition appeared in 2005, it has shaped the field and become the primary reference work for multimedia learning. Multimedia environments including online presentations, e courses, interactive lessons, simulation games, slideshows and even textbooks play a crucial role in education. This revised second edition incorporates the latest developments in multimedia learning and contains new chapters on topics such as drawing, video feedback, working memory, learner control and intelligent tutoring systems. It examines research based principles to determine the most effective methods of multimedia instruction and considers research findings in the context of cognitive theory to explain how these methods work.

Handbook of Research on Educational Communications and Technology J. Michael Spector, M. David Merrill, Jan Elen, M. J. Bishop, 2013-07-03 The 4th edition of the Handbook of Research on Educational Communications and Technology expands upon the previous 3 versions providing a comprehensive update on research pertaining to new and emerging educational technologies. Chapters that are no longer pertinent have been eliminated in this edition with most chapters being completely rewritten, expanded and updated. Additionally, new chapters pertaining to research methodologies in educational technology have been added due to expressed reader interest. Each chapter now contains an extensive literature review documenting and explaining the most recent outstanding research including major findings and methodologies employed. The Handbook authors continue to be international leaders in their respective fields; the list is cross disciplinary by design and great effort was taken to invite authors outside of the traditional

Michael Spector,2015-01-29 The SAGE Encyclopedia of Educational Technology examines information on leveraging the power of technology to support teaching and learning While using innovative technology to educate individuals is certainly not a new topic how it is approached adapted and used toward the services of achieving real gains in student performance is extremely pertinent This two volume encyclopedia explores such issues focusing on core topics and issues that will retain relevance in the face of perpetually evolving devices services and specific techniques As technology evolves and becomes even more low cost easy to use and more accessible the education sector will evolve alongside it For instance issues surrounding reasoning behind how one study has shown students retain information better in traditional print formats are a topic explored within the pages of this new encyclopedia Features

A collection of 300 350 entries are organized in A to Z fashion in 2 volumes available in a choice of print or electronic formats. Entries authored by key figures in the field conclude with cross references and further readings. A detailed index, the Reader's Guide, themes, and cross references combine for search and browse in the electronic version. This reference encyclopedia is a reliable and precise source on educational technology and a must-have reference for all academic libraries.

Handbook of Research on Transformative and Innovative Pedagogies in Education Keengwe, Jared, 2022-05-13. Various pedagogies such as the use of digital learning in education have been used and researched for decades but many schools have little to show for these initiatives. This contrasts starkly with technology-supported initiatives in other fields such as business and healthcare. Traditional pedagogies and general digital technology applications have yet to impact education in a significant way that transforms learning. A primary reason for this minimal impact on learning is that digital technologies have attempted to make traditional instructional processes more efficient rather than using a more appropriate paradigm for learning. As such, it is important to look at digital technology as a partner and use transformative applications to become partners with students, not teachers, to empower their learning process both in and out of school. The *Handbook of Research on Transformative and Innovative Pedagogies in Education* is a comprehensive reference that identifies and justifies the paradigm of transformative learning and pedagogies in education. It provides exemplars of existing transformative applications that, if used as partners to empower student learning, have the potential to dramatically engage students in a type of learning that better fits 21st-century learners. Covering topics such as gamification, project-based learning, and professional development, this major reference work is an essential resource for pre-service and in-service teachers, educational technologists, instructional designers, educational administration, and faculty researchers and academicians seeking pedagogical models that inspire students to learn meaningfully.
