Conceptual Modeling ER'99 Jacky Akoka, Mokrane

Bouzeghoub, Isabelle Comyn-Wattiau, Elisabeth Metais, 2003-07-31 This book provides a comprehensive state of the art in conceptual modeling. It grew out of research papers presented at the 18th International Conference on Conceptual Modeling ER 99 and arranged by the editors. The plan of the conference is to cover the whole spectrum of conceptual modeling as it relates to database and information systems design and to offer a complete coverage of data and process modeling database technology and database applications. The aim of the conference and of these proceedings is to present new insights related to each of these topics. This book contains both selected and invited papers. The 33 selected papers are organized in 11 sessions encompassing the major themes of the conference especially schema transformation evolution and integration temporal database design views and reuse in conceptual modeling advanced conceptual modeling business process modeling and workflows data warehouse design. Besides the selected papers 3 invited papers present the views of three keynote speakers internationally known for their contribution to conceptual modeling and database research and for their active role in knowledge dissemination. Peter Chen presents the results of his ongoing research on ER model XML and the Web. Georges Gardarin presents the first results of an ESPRIT project federating various data sources with XML and XML QL. Finally Matthias Jarke develops a way to capture and evaluate the experiences gained about process designs in so called process data warehouses.

Conceptual Modeling for Traditional and Spatio-Temporal Applications Christine Parent, Stefano Spaccapietra, Esteban Zimányi, 2006-09-02 From environmental management to land planning and geo marketing the number of application domains that may greatly benefit from using data enriched with spatio temporal features is expanding very rapidly. Unfortunately development of new spatio temporal applications is hampered by the lack of conceptual design methods suited to cope with the additional complexity of spatio temporal data. This complexity is obviously due to the particular semantics of space and time but also to the need for multiple representations of the same reality to address the diversity of requirements from highly heterogeneous user communities. Conceptual design methods are also needed to facilitate the exchange and reuse of existing data sets a must in geographical data management due to the high collection costs of the data. Yet current practice in areas like geographical information systems or moving objects databases does not include conceptual design methods very well if at all. This book shows that a conceptual design approach for spatio temporal databases is both feasible and easy to apprehend. While providing a firm basis through extensive discussion of traditional data modeling concepts the major focus of the book is on modeling spatial and temporal information. Parent Spaccapietra and Zim nyi provide a detailed and comprehensive description of an approach that fills the gap between application conceptual requirements and system capabilities covering both data modeling and data manipulation features. The ideas presented summarize several years of research on the characteristics and description of space time and perception. In addition to the authors own data modeling approach MADS Modeling of Application Data with Spatio temporal features the book also

surveys alternative data models and approaches from industry and academia that target support of spatio temporal modeling The reader will acquire intimate knowledge of both the traditional and innovative features that form a consistent data modeling approach Visual notations and examples are employed extensively to illustrate the use of the various constructs Therefore this book is of major importance and interest to advanced professionals researchers and graduate or post graduate students in the areas of spatio temporal databases and geographical information systems For anyone thinking of doing research in this field or who is developing a system based on spatio temporal data this text is essential reading Mike Worboys U Maine Orono ME USA The high level semantic model presented and validated in this book provides essential guidance to researchers and implementers when improving the capabilities of data systems to serve the actual needs of applications and their users in the temporal and spatial domains that are so prevalent today Gio Wiederhold Stanford U CA USA

Conceptual Modeling--ER ..., 2002 XML-Based Data Management and Multimedia Engineering - EDBT 2002 Workshops Akmal B. Chaudhri, Chabane Djeraba, Rainer Unland, Wolfgang Lindner, 2002-11-19 This volume comprises papers from the following three workshops that were part of the complete program for the International Conference on Extending Database Technology EDBT held in Prague Czech Republic in March 2002 XML Based Data Management XMLDM Second International Workshop on Multimedia Data and Document Engineering MDDE Young Researchers Workshop YRWS Together the three workshops featured 48 high quality papers selected from approximately 130 submissions It was therefore difficult to decide on the papers that were to be accepted for presentation We believe that the accepted papers substantially contribute to their particular fields of research The workshops were an excellent basis for intense and highly fruitful discussions The quality and quantity of papers show that the areas of interest for the workshops are highly active A large number of excellent researchers are working in relevant fields producing research output that is not only of interest to other researchers but also for industry The organizers and participants of the workshops were highly satisfied with the output The high quality of the presenters and workshop participants contributed to the success of each workshop The amazing environment of Prague and the location of the EDBT conference also contributed to the overall success Last but not least our sincere thanks to the conference organizers the organizing team was always willing to help and if there were things that did not work assistance was quickly available Handbook on Architectures of Information Systems Peter Bernus, Kai Mertins, Günter Schmidt, 2013-03-14 This book is the first volume of a running series under the title International Handbooks on Information Systems The series is edited by Peter Bemus Jacek Blazewicz Günter Schmidt and Mike Shaw One objective is to give state of the art surveys on selected topics of information systems theory and applications To this end a distinguished international group of academics and practitioners are invited to provide a reference source not only for problem solvers in business industry and government but also for professional researchers and graduate students It seemed appropriate to start the series with a volume covering some basic aspects about information systems The focus of the first volume is therefore

architectures It was decided to have a balanced number of contributions from academia and practitioners The structure of the material follows a differentiation between modelling languages tools and methodologies These are collected into separate parts allowing the reader of the handbook a better comparison of the contributions Information systems are a major component of the entire enterprise and the reader will notice that many contributions could just as easily have been included in another volume of the series which is on enterprise integration Conversely some traditionally information systems topics as organisational analysis and strategic change management methods will be treated in more depth in the Handbook on Enterprise Integration The two volumes will complement each other
