We live in a digital world where we use digital tools and smart devices to communicate over the Internet In turn an enormous amount of data gets generated The traditional computing architectures are inefficient in storing and managing this massive amount of data Unfortunately the data cannot be ignored as it helps businesses to make better decisions solve problems understand performance improve processes and understand customers Therefore we need modern systems capable of handling and managing data efficiently In the past few decades many distributed computing paradigms have emerged and we have noticed a substantial growth in the applications based on such emerging paradigms Some well known emerging computing paradigms include cloud computing fog computing and edge computing which have leveraged the increase in the volume of data being generated every second However the distributed computing paradigms face critical

challenges including network management and cyber security We have witnessed the development of various networking models IoT SDN and ICN to support modern systems requirements However they are undergoing rapid changes and need special attention The main issue faced by these paradigms is that traditional solutions cannot be directly applied to address the challenges Therefore there is a significant need to develop improved network management and cyber security solutions To this end this book highlights the challenges faced by emerging paradigms and presents the recent developments made to address the challenges More specifically it presents a detailed study on security issues in distributed computing environments and their possible solutions followed by applications of medical IoT deep learning IoV healthcare etc
