Coming To Life Christiane Nusslein, 2006-04-11 Christiane Nusslein Volhard winner of The Nobel Prize in Medicine gives a concise and illustrative overview of genetics evolution and cellular processes as well as a discussing of current ethical issues in human biology *Coming to Life* is a remarkable journey through developmental biology that reveals miraculous processes in the microscopic world of cells Through an accounting of groundbreaking discoveries Christiane Nusslein Volhard tells us many answers to historical and contemporary questions in science For example she brings us the newest knowledge about embryonic forms explains the genetic mechanisms that influence adult development of all animals and shares insights into the ethical standards society must uphold in the face of new scientific discoveries As the author leads us from laboratory research to its applications in human beings we also come to understand why children look like their parents how an embryonic cell knows to become an eye rather than an eyelash and other incredible influences that result in variety in life Complete with her own hand drawn illustrations *Coming to Life* gives a rare opportunity to understand a Nobel Prize winner's passion for science in concise understandable language 55 b w illustrations

The Developing Genome David Scott Moore, 2015 An accessible introduction to behavioral epigenetics *The Developing Genome* explores how experiences influence genetic activity We develop as we do not because of the genes we have but because of what our genes do *The Developing Genome* explains this new discipline and its revolutionary implications changing how we understand development and evolution

The Developing Genome David S. Moore, 2015-03-02 An accessible introduction to behavioral epigenetics *The Developing Genome* explores how experiences influence genetic activity We develop as we do not because of the genes we have but because of what our genes do *The Developing Genome* explains this new discipline and its revolutionary implications changing how we understand development and evolution

The Making of You Katharina Vestre, 2019-10-08 A quirky and inspired guide to your very own origin story This enlightening and irresistible book for adults explains how you were made not with the standard euphemisms told to us as children but with vivid exacting prose that unveils all the complex processes we never knew produced human life With a brilliant talent for thoughtful charming science writing Katharina Vestre takes us from cell to human and shares surprising facts along the way such as that sperm have a sense of smell and that hiccups were likely inherited from our ancient underwater ancestors She also shows why gender is more complicated than we think and reveals the questions scientists still ponder about how we came to be A miniature drama of cosmic significance this is the incredible story of you

[Information Dynamics](#) Thomas Dittrich, 2022-11-23 This wide ranging book introduces information as a key concept not only in physics from quantum mechanics to thermodynamics but also in the neighboring sciences and in the humanities The central part analyzes dynamical processes as manifestations of information flows between microscopic and macroscopic scales and between systems and their environment Quantum mechanics is interpreted as a reconstruction of mechanics based on fundamental limitations of information processing on the

smallest scales These become particularly manifest in quantum chaos and in quantum computing Covering subjects such as causality prediction undecidability chaos and quantum randomness the book also provides an information theoretical view of predictability More than 180 illustrations visualize the concepts and arguments The book takes inspiration from the author's graduate level topical lecture but is also well suited for undergraduate studies and is a valuable resource for researchers and professionals

Plastic Reason Tobias Rees, 2016-05-03 Throughout the twentieth century neuronal researchers knew the adult human brain to be a thoroughly fixed and immutable cellular structure devoid of any developmental potential Plastic Reason is a study of the efforts of a few Parisian neurobiologists to overturn this rigid conception of the central nervous system by showing that basic embryogenetic processes most spectacularly the emergence of new cellular tissue in the form of new neurons axons dendrites and synapses continue in the mature brain Furthermore these researchers sought to demonstrate that the new tissues are still unspecific and hence literally plastic and that this cellular plasticity is constitutive of the possibility of the human Plastic Reason grounded in years of fieldwork and historical research is an anthropologist's account of what has arguably been one of the most sweeping events in the history of brain research the highly contested effort to consider the adult brain in embryogenetic terms A careful analysis of the disproving of an established truth it reveals the turmoil that such a disruption brings about and the emergence of new possibilities of thinking and knowing

The Swings of Science Len Pismen, 2018-12-06 This book is a personal account of some aspects of the emergence of modern science mostly from the viewpoint of those branches of physics which provided the much needed paradigm shift of more is different that heralded the advent of complexity science as an antidote to the purely reductionist approach in fundamental physics It is also about the humans that have helped to shape these developments including personal reminiscences and the realization that the so called exact sciences are inevitably also a social endeavour with all its facets Served by the razor sharp wit of the author this erudite ramble is meant to be neither comprehensive nor systematic but its generous insights will give the inquisitive academically trained mind a better understanding of what science and physics in particular could or should be about
