Victor C. Yang,That T. Ngo,2000-04-30 A biosensor is a device in which a bioactive layer lies in direct contact with a transducer whose responses to change in the bioactive layer generate electronic signals for interpretation The bioactive layer may consist of membrane bound enzymes anti bodies or receptors The potential of this blend of electronics and biotechnology includes the direct assay of clinically important substrates e g blood glucose and of substances too unstable for storage or whose concentrations fluctuate rapidly Written by the leading researchers in the field this book reflects the most current developments in successfully constructing a biosensor Major applications are in the fields of pharmacology molecular biology virology and electronics **Biosensors and Modern Biospecific Analytical Techniques** L. Gorton,2005-04-02

Biosensors and Modern Biospecific Analytical Techniques further expands the Comprehensive Analytical Chemistry series coverage of rapid analysis based on advanced technological developments This 12 chapter volume summarizes the main developments in the biosensors field over the last 10 years It provides a comprehensive study on the different types of biosensors including DNA based enzymatic optical self assembled monolayers and the third generation of biosensors As well as many technological developments on bioanalytical microsystems and new materials for biosensors antibody and immunoassay developments have a prominent place in the book Provides a comprehensive study on the different types of biosensors Applications covered include environmental analysis bioprocess monitoring and biomedicine An indispensable resource for those working in analytical chemistry CMOS Technology for IC Biosensor and Applications Dr. Abdullah Tashtoush,2013-07-23 About the Book The book includes a variety of techniques that are conducting biosensors as transducers The single die has all of the biosensors implemented within it which leads to a new generation of multibiosensors named as multi labs on a single chip MLoC Biosensors are analytical devices that combine a biologically sensitive element with a physical or chemical transducer to detect the presence of specific compounds selectively and quantitatively This book explores the feasibility of microelectronic techniques in a successful attempt to get huge cost savings in mass production fast reacting and disposable biosensors The book is lied in six chapters and four appendices These sensors were implemented using CMOSP35 technology on a single chip that covers new techniques for detecting biomedical and biological samples at low concentration level based on CMOS MEMS technology batch process The methodology of the proposed multibiosensors

that is named by multi lab on a chip MLoC lies on miniaturizing transducers which is based on optical CMOS technology charge based capacitance measurements CBCM electrochemical impedance spectroscopy EIS and CMOS microcoils incorporating with interdigitated microelectrode array IDMA The aforementioned approaches technically proved their capability and reliability overwhelmingly among the used conventional techniques for that reason these techniques have been proposed to create compact and portable biosensors for sensitive and rapid detection of biomedical and biological samples While the four proposed biosensors have common objectives they differ in the method and analysis used and postulates engaged by a discipline to achieve the objectives the inquiry of the principles of investigation in a particular field
