Lisp Guy L. Steele, Scott E. Fahlman, 1990 Sur le rayonnage le 18 mai 2005 *Artificial Intelligence with Common Lisp* James L. Noyes, 1992 The book provides a balanced survey of the fundamentals of artificial intelligence emphasizing the relationship between symbolic and numeric processing The text is structured around an innovative interactive combination of LISP programming and AI it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented After an overview of the field of artificial intelligence the text presents the fundamentals of LISP explaining the language s features in more detail than any other AI text Common Lisp is then used consistently in both programming exercises and plentiful examples of actual AI code Back cover This text is intended to provide an introduction to both AI and LISP for those having a background in computer science and mathematics Pref

The Seasoned Schemer, second edition Daniel P. Friedman, Matthias Felleisen, 1995-12-21 The notion that thinking about computing is one of the most exciting things the human mind can do sets both The Little Schemer formerly known as The Little LISPer and its new companion volume The Seasoned Schemer apart from other books on LISP The authors

enthusiasm for their subject is compelling as they present abstract concepts in a humorous and easy to grasp fashion Together these books will open new doors of thought to anyone who wants to find out what computing is really about The Little Schemer introduces computing as an extension of arithmetic and algebra things that everyone studies in grade school and high school It introduces programs as recursive functions and briefly discusses the limits of what computers can do The authors use the programming language Scheme and interesting foods to illustrate these abstract ideas The Seasoned Schemer informs the reader about additional dimensions of computing functions as values change of state and exceptional cases The Little LISPer has been a popular introduction to LISP for many years It had appeared in French and Japanese The Little Schemer and The Seasoned Schemer are worthy successors and will prove equally popular as textbooks for Scheme courses as well as companion texts for any complete introductory course in Computer Science

Structure and Interpretation of Computer Programs, second edition Harold Abelson, Gerald Jay Sussman, 1996-07-25 Structure and Interpretation of Computer Programs has had a dramatic impact on computer science curricula over the past decade This long awaited revision contains changes throughout the text There are new implementations of most of the major programming systems in the book including the interpreters and compilers and the authors have incorporated many small changes that reflect their experience teaching the course at MIT since the first edition was published A new theme has been introduced that emphasizes the central role played by different approaches to dealing with time in computational models objects with state concurrent programming functional programming and lazy evaluation and nondeterministic programming There are new example sections on higher order procedures in graphics and on applications of stream processing in numerical programming and many new exercises In addition all the programs have been reworked to run in any Scheme implementation that adheres to the IEEE standard

Handbook on Architectures of Information Systems Peter Bernus, 2006 An authoritative source about methods languages methodologies and supporting tools for constructing information systems that also provides examples for references models Its strength is the careful selection of each of the above mentioned components based on technical merit The second edition completely revises all articles and features new material on the latest developments in XML UML The structure follows the definition of the major components of Enterprise Integration as defined by GERAM Generalised Enterprise Reference Architecture and Methodology 1st edition sold about 600 copies since January 2003

Generative and Component-Based Software Engineering Krzysztof Czarnecki, Ulrich W. Eisenecker, 2003-06-26 In the past two years the Smalltalk and Java in Industry and Education Conference STJA featured a special track on generative programming which was organized by the working group Generative and Component Based Software Engineering of the Gesellschaft für Informatik FG 2.1.9 Object Oriented Software Engineering This track covered a wide range of related topics from domain analysis software system family engineering and software product lines to extendible compilers and active libraries The talks and keynotes directed towards this new software engineering paradigm received

much attention and interest from the STJA audience. Hence the STJA organizers suggested enlarging this track making it more visible and open to wider international participation. This is how the GCSE symposium was born. The first GCSE symposium attracted 39 submissions from all over the world. This impressive number demonstrates the international interest in generative programming and related fields. After a careful review by the program committee fifteen papers were selected for presentation. We are very grateful to the members of the program committee all of them renowned experts for their dedication in preparing thorough reviews of the submissions. Special thanks go to Elke Pulvermüller and Andreas Speck who proposed and organized a special conference event the Young Researchers Workshop YRW. This workshop provided a unique opportunity for young scientists and Ph.D.

ECOOP '99 - Object-Oriented Programming Rachid Guerraoui, 1999-06-02

My favorite is Object Oriented. Most software systems that have been built recently are claimed to be Object Oriented. Even older software systems that are still in commercial use have been upgraded with some OO flavors. The range of areas where OO can be viewed as a must have feature seems to be as large as the number of fields in computer science. If we stick to one of the original views of OO that is to create cost effective software solutions through modeling physical abstractions the application of OO to any field of computer science does indeed make sense. There are OO programming languages OO operating systems OO databases OO specifications OO methodologies etc. So what does a conference on Object Oriented Programming really mean? I honestly don't know. What I do know is that since its creation in 1987 ECOOP has been attracting a large number of contributions and ECOOP conferences have ended up with high quality technical programs featuring interesting mixtures of theory and practice. Among the 183 initial submissions to ECOOP 99 20 papers were selected for inclusion in the technical program of the conference. Every paper was reviewed by three to five referees. The selection of papers was carried out during a 4 day program committee meeting at the Swiss Federal Institute of Technology in Lausanne. Papers were judged according to their originality presentation quality and relevance to the conference topics.

Artificial Intelligence in Industrial Decision Making, Control and Automation S.G. Tzafestas, H. B. Verbruggen, 2012-12-06

This book is concerned with Artificial Intelligence AI concepts and techniques as applied to industrial decision making control and automation problems. The field of AI has been expanded enormously during the last years due to that solid theoretical and application results have accumulated. During the first stage of AI development most workers in the field were content with illustrations showing ideas at work on simple problems. Later as the field matured emphasis was turned to demonstrations that showed the capability of AI techniques to handle problems of practical value. Now we arrived at the stage where researchers and practitioners are actually building AI systems that face real world and industrial problems. This volume provides a set of twenty four well selected contributions that deal with the application of AI to such real life and industrial problems. These contributions are grouped and presented in five parts as follows: Part 1 General Issues Part 2 Intelligent Systems Part 3 Neural Networks in Modelling Control and Scheduling Part 4 System Diagnostics Part 5 Industrial Robotic Manufacturing and Organizational

Systems Part 1 involves four chapters providing background material and dealing with general issues such as the conceptual integration of qualitative and quantitative models the treatment of timing problems at system integration and the investigation of correct reasoning in interactive man robot systems
