Dependence Modeling With Copulas Chapman Hallcrc Monographs On Statistics Applied Probability:

Dependence Modeling with Copulas Harry Joe, 2014-06-26 Dependence Modeling with Copulas covers the substantial advances that have taken place in the field during the last 15 years including vine copula modeling of high dimensional data Vine copula models are constructed from a sequence of bivariate copulas The book develops generalizations of vine copula models including common and structured factor models that extend from the Gaussian assumption to copulas It also discusses other multivariate constructions and parametric copula families that have different tail properties and presents extensive material on dependence and tail properties to assist in copula model selection The author shows how numerical methods and algorithms for inference and simulation are important in high dimensional copula applications He presents the algorithms as pseudocode illustrating their implementation for high dimensional copula models He also incorporates results to determine dependence and tail properties of multivariate distributions for future constructions of copula models

Modern Statistical Methods for Spatial and Multivariate Data Norou Diawara, 2019-06-29 This contributed volume features invited papers on current models and statistical methods for spatial and multivariate data With a focus on recent advances in statistics topics include spatio temporal aspects classification techniques the multivariate outcomes with zero and doubly inflated data discrete choice modelling copula distributions and feasible algorithmic solutions Special emphasis is placed on applications such as the use of spatial and spatio temporal models for rainfall in South Carolina and the multivariate sparse areal mixed model for the Census dataset for the state of Iowa Articles use simulated and aggregated data examples to show the flexibility and wide applications of proposed techniques Carefully peer reviewed and pedagogically presented for a broad readership this volume is suitable for graduate and postdoctoral students interested in interdisciplinary research Researchers in applied statistics and sciences will find this book an important resource on the latest developments in the field In keeping with the STEAM H series the editors hope to inspire interdisciplinary understanding and collaboration

Copulas and Dependence Models with Applications Manuel Úbeda Flores, Enrique de Amo Artero, Fabrizio Durante, Juan Fernández Sánchez, 2017-10-13 This book presents contributions and review articles on the theory of copulas and their applications The authoritative and refereed contributions review the latest findings in the area with emphasis on classical topics like distributions with fixed marginals measures of association construction of copulas with given additional information etc The book celebrates the 75th birthday of Professor Roger B Nelsen and his outstanding contribution to the development of copula theory Most of the book's contributions were presented at the conference Copulas and Their Applications held in his honor in Almería Spain July 3-5 2017 The chapter When Gumbel met Galambos is published open access under a CC BY 4.0 license

Copulae and Multivariate Probability Distributions in Finance Alexandra Dias, Mark Salmon, Chris Adcock, 2013-08-21 Portfolio theory and much of asset pricing as well as many empirical applications depend on the use of multivariate probability distributions to describe asset returns Traditionally this has meant the

multivariate normal or Gaussian distribution More recently theoretical and empirical work in financial economics has employed the multivariate Student and other distributions which are members of the elliptically symmetric class There is also a growing body of work which is based on skew elliptical distributions These probability models all exhibit the property that the marginal distributions differ only by location and scale parameters or are restrictive in other respects Very often such models are not supported by the empirical evidence that the marginal distributions of asset returns can differ markedly Copula theory is a branch of statistics which provides powerful methods to overcome these shortcomings This book provides a synthesis of the latest research in the area of copulae as applied to finance and related subjects such as insurance Multivariate non Gaussian dependence is a fact of life for many problems in financial econometrics This book describes the state of the art in tools required to deal with these observed features of financial data This book was originally published as a special issue of the European Journal of Finance

Tropical Ecosystems in the 21st Century, 2020-03-19 Advances in Ecological Research Volume 62 the latest release in this ongoing series covers a long list of topics including Monitoring tropical insects in the 21st Century The distribution and structure of long term and large scale fire manipulation experiments The Agua Salud Project Basic and applied research informing management of tropical landscapes for the 21st century Conservation strategies and principles for tropical forests Assessing forest quality using satellite remote sensing data A test case using the Sabah Biodiversity Experiment eDNA approaches to understand the current state and future of biodiversity of the Amazonian biome pitfalls improvements and challenges and much more

A Multivariate Claim Count Model for Applications in Insurance Daniela Anna Selch, Matthias Scherer, 2018-08-31 This monograph presents a time dynamic model for multivariate claim counts in actuarial applications Inspired by real world claim arrivals the model balances interesting stylized facts such as dependence across the components over dispersion and the clustering of claims with a high level of mathematical tractability including estimation sampling and convergence results for large portfolios and can thus be applied in various contexts such as risk management and pricing of re insurance contracts The authors provide a detailed analysis of the proposed probabilistic model discussing its relation to the existing literature its statistical properties different estimation strategies as well as possible applications and extensions Actuaries and researchers working in risk management and premium pricing will find this book particularly interesting Graduate level probability theory stochastic analysis and statistics are required

Advanced Statistical Methods in Process Monitoring, Finance, and Environmental Science Sven Knoth, Yarema Okhrin, Philipp Otto, 2024-10-22 This book presents a unique collection of contributions on modern methods and applications in three key areas of statistics celebrating the significant work of Wolfgang Schmid in this field It is structured thematically into parts focusing on statistical process monitoring financial statistics and spatial statistics with environmetrics each featuring chapters from leading experts The opening articles on statistical process monitoring present novel methodologies for the detection of anomalies and control charting techniques which are crucial for maintaining quality

in manufacturing processes Detailed discussions are included on integrating multivariate statistical methods and real time monitoring to enhance process reliability and efficiency The part on financial statistics explores rigorous approaches in financial econometrics with an emphasis on dynamic modelling of market volatility and risk assessment Contributions cover advanced asset allocation strategies leveraging high dimensional data analysis and the application of machine learning techniques Spatial statistics and environmetrics are addressed through innovative research on the statistical analysis of environmental data This includes the use of geostatistical models and hybrid models that combine traditional statistical techniques with machine learning to improve the prediction of environmental phenomena Key topics here involve the modelling of extremes and airborne pollutants the prediction of earthquakes using a smartphone based sensor network and reviews of selected topics essential in modern spatial statistics Each part not only reflects Wolfgang Schmid s interests and impact in these areas but also provides detailed theoretical and applied studies demonstrating how these sophisticated statistical methods can be effectively employed in practical scenarios This makes the book an indispensable resource for researchers and practitioners looking to apply cutting edge statistical techniques in these complex fields

Quantitative Methods for Economics and Finance J.E.
